

To be the standard in the era of IoT

- ECHONET Lite can be the Open, international, and social acceptable standard in receiving a recommendation by the government policy.
 - High interoperability of ECHONET Lite devices and government policy support the spread
- Challenge in IoT is to know interoperability is important but not enough. ECHONET Lite promises interoperability at the device level but needs to ensure trust as a system
 - System thinking to enable a user merit is necessary
 - Communicate with the other standards
 - New collaboration to design a secured, trusted, quality service: 5G Plus IPv6
