

# ECHONET Specification

**Version 3.60**

**- English Version -**

- Version 3.20                      December 12, 2006                      Open to the public  
 The parts to which changes have been made are as follows:

	Changed part (section title in the table of contents)	<Summary of addition/change>
2	Definitions of Terms	Definitions of terms modified: * ECHONET router * Ordinary node * Master router Definition of term added: * Slave router

- Version 3.30                      December 2, 2004                      Open to consortium members  
 The parts to which changes have been made are as follows:

	Changed part (section title in the table of contents)	Summary of additions/changes
1	General Table of Contents	
2	Definitions of Terms	The “Definitions of IEEE802.11/11b Terms” section was added.

- Version 3.40 Draft              December 28, 2004                      Open to consortium members  
 The parts to which changes have been made are as follows:

	Changed part (section title in the table of contents)	Summary of additions/changes
1	General Table of Contents	
2	Definitions of Terms	The “Definitions of Power Line Communication Protocol C System Terms” section was added.
3	Definitions of Terms	The “Definitions of Power Line Communication Protocol D System Terms” section was added.

- Version 3.40                      February 3, 2005                      Open to consortium members
- Version 3.41                      May 11, 2005                      Open to consortium members

The parts to which changes have been made are as follows:

	Changed part (section title in the table of contents)	Summary of additions/changes
1	General Table of Contents	General Table of Contents changed.

---

• Version 3.2	October 13, 2005	Open to the public
• Version 3.42	October 27, 2005	Open to consortium members
• Version 3.50 Draft	August 3, 2006	Open to consortium members
• Version 3.50	September 20, 2006	Open to consortium members
• Version 3.51 Draft	February 2, 2007	Open to consortium members
• Version 3.60	March 5, 2007	Open to consortium members
	December 11, 2007	Open to the public

[Note] In Version 2.00 and later versions, the household power distribution line communication protocols have been integrated into a single protocol called household power distribution line communication method A.

The specifications published by the ECHONET Consortium are established without regard to industrial property rights (e.g., patent and utility model rights). In no event will the ECHONET Consortium be responsible for industrial property rights to the contents of its specifications.

The publisher of this specification is not authorized to license and/or exempt any third party from responsibility for JAVA, IrDA, Bluetooth or HBS.

A party who intends to use JAVA, IrDA, Bluetooth or HBS should take action in being licensed for above-mentioned specifications.

In no event will the publisher of this specification be liable to you for any damages arising out of use of this specification.

The original language of The ECHONET Specification is Japanese. The English version of the Specification was translated the Japanese version. Queries in the English version should be refereed to the Japanese version.

---

## General Contents

### Part I ECHONET Overview

Chapter 1	Introduction .....	1-1
1.1	Envisioned Home Network Development.....	1-1
1.2	ECHONET Development Objectives.....	1-2
1.3	ECHONET Aims .....	1-3
1.4	Envisioned Applications.....	1-3
1.5	ECHONET Characteristics .....	1-5
Chapter 2	Definition of System Configuration.....	2-1
2.1	ECHONET System Architecture.....	2-1
2.2	ECHONET Network Configuration.....	2-3
2.3	ECHONET Component Devices.....	2-4
2.4	Connections to External Networks and Systems.....	2-6
Chapter 3	ECHONET Communication Layer Configuration.....	3-1
3.1	Overview of ECHONET Communication Layer Configuration.....	3-1
3.2	Communication Layer Elements .....	3-2
3.2.1	Service Middleware.....	3-3
3.2.2	ECHONET Communication Processing Block.....	3-4
3.2.3	Protocol Difference Absorption Processing Block.....	3-4
3.2.4	Device Object.....	3-4
3.2.5	Transmission Medium and Lower-Layer Communication Software.....	3-4
3.2.6	API .....	3-5
3.2.7	Common Lower-Layer Communication Interface .....	3-6
3.2.8	Individual Lower-Layer Communication Interface .....	3-6
Chapter 4	Connection of Devices to ECHONET Networks .....	4-1
4.1	Implementation of ECHONET Specification in Devices .....	4-1
4.2	ECHONET Device Types .....	4-1
4.3	Adapters for Connection to ECHONET Networks .....	4-2
4.4	Connection Formats .....	4-3
Chapter 5	Structure of ECHONET Specifications and Intended Readership.....	5-1
5.1	Structure of Specifications .....	5-1
5.2	Intended Readership.....	5-1
5.3	Version Numbering System.....	5-4

---

## Part II ECHONET Communication Middleware Specifications

Chapter 1	Overview .....	1-1
1.1	Basic Concept.....	1-1
1.2	Positioning on Communications Layers .....	1-1
Chapter 2	ECHONET Address .....	2-1
2.1	Basic Concept.....	2-1
2.2	ECHONET Address Structure.....	2-1
2.3	Net ID.....	2-2
2.4	Node ID .....	2-2
Chapter 3	ECHONET Object.....	3-1
3.1	Basic Concept.....	3-1
3.2	Device Objects .....	3-2
3.3	Profile Objects.....	3-3
3.4	Communications Definition Objects.....	3-3
3.5	Service Objects.....	3-3
3.6	ECHONET Objects as Viewed from Application Software.....	3-3
Chapter 4	Message Structure (Frame Format).....	4-1
4.1	Basic Concept.....	4-1
4.2	Frame Format .....	4-1
4.2.1	ECHONET Headers (EHD) .....	4-6
4.2.2	Source/Destination ECHONET Address (SEA/DEA) .....	4-7
4.2.3	ECHONET Byte Counter (EBC) .....	4-10
4.2.4	ECHONET Data (EDATA) .....	4-10
4.2.5	Object Message Header (OHD) .....	4-10
4.2.6	ECHONET Objects (EOJ) .....	4-10
4.2.7	ECHONET Properties (EPC) .....	4-14
4.2.8	ECHONET Service (ESV) .....	4-15
4.2.9	ECHONET Property Value Data (EDT) .....	4-33
4.2.10	ECHONET Data Counter (EDC) .....	4-33
4.2.11	Compound ECHONET Service (CpESV).....	4-34
4.2.12	Processing Target Property Counter (OPC) .....	4-43
4.2.13	Property Data Counter (PDC) .....	4-43
Chapter 5	Basic Sequences .....	5-1
5.1	Basic Concept.....	5-1
5.2	Basic Sequences for Object Control.....	5-2
5.2.1	Basic Sequences for Object Control in General.....	5-2
5.2.2	Basic Sequences for Service Content.....	5-5
5.3	Basic Sequence for ECHONET Node Startup .....	5-7
5.3.1	Basic Sequence for ECHONET Node Cold Start .....	5-8
5.3.2	Basic Sequence for ECHONET Node Warm Start.....	5-10
5.4	Basic Sequences for Startup of NetID Servers and ECHONET Routers.....	5-13
5.4.1	Basic Sequence for NetID Server Cold Start .....	5-15
5.4.2	Basic Sequence for NetID Server Warm Start .....	5-16
5.4.3	Basic Sequence for ECHONET Router Cold Start .....	5-17
5.4.4	Basic Sequence for ECHONET Router Warm Start .....	5-24

---

5.5	Basic Sequence for ECHONET Node Normal Operation .....	5-26
5.5.1	Basic Sequence for Detecting EA Duplication .....	5-26
5.5.2	Basic Sequence for Detecting Nodes with Improper NetIDs.....	5-27
5.5.3	Basic Sequence for NetID Write Request Reception.....	5-28
5.6	Basic Sequence for Normal NetID Server Operation .....	5-29
5.6.1	NetID Server Processing .....	5-30
5.7	Basic Sequence for Normal Operation of ECHONET Routers .....	5-34
5.7.1	Received Message Routing Processing.....	5-35
5.7.2	Default Router Processing.....	5-37
5.8	Types of Messages that ECHONET Nodes Are Not Allowed to Send .....	5-38
5.8.1	Ordinary nodes .....	5-38
5.8.2	NetID servers.....	5-38
5.8.3	ECHONET routers .....	5-39
Chapter 6	ECHONET Communications Processing Block Processing Specifications .....	6-1
6.1	Basic Concept.....	6-1
6.2	Received Message Determination Processing Specifications .....	6-2
6.3	Routing Processing Specifications .....	6-4
6.3.1	Routing Processing Specifications for non-ECHONET Router Devices.....	6-4
6.3.2	Routing Processing Specifications for ECHONET Routers .....	6-5
6.4	Object Processing Specifications .....	6-5
6.4.1	Object Processing (1) .....	6-5
6.4.2	Object Processing (2) .....	6-6
6.4.3	Object Processing (3) .....	6-6
6.5	Basic API Processing .....	6-7
6.6	Send Message Creation/Management Processing.....	6-7
6.7	Startup Processing .....	6-7
6.7.1	Node Startup Processing .....	6-7
6.8	Description of Processing Functions.....	6-9
Chapter 7	Protocol Difference Absorption Processing Block Processing Specifications.....	7-1
7.1	Basic Concept.....	7-1
7.2	Message Receipt/Assembly Processing .....	7-2
7.2.1	Message Receipt/Assembly Processing (1).....	7-2
7.2.2	Message Receipt/Assembly Processing (2).....	7-2
7.3	Message Splitting/Transmission Processing .....	7-2
7.3.1	Message Splitting/Transmission Processing (1).....	7-2
7.3.2	Message Splitting/Transmission Processing (2).....	7-2
7.4	Address Conversion Processing .....	7-3
7.4.1	Address Conversion Specifications for Power Line Communications Protocol.....	7-3
7.4.2	Address Conversion Specifications for Low-power Wireless Protocol.....	7-4
7.4.3	Address Conversion Specifications for Extended HBS Protocol.....	7-4
7.4.4	Address Conversion Specifications for IrDA Control Protocol.....	7-4
7.4.5	Address Conversion Specifications for LonTalk Protocol.....	7-4
7.4.6	Address Conversion Requirements for IP/Bluetooth Protocol .....	7-4
7.4.7	Address Conversion Requirements for IP/Ethernet/IEEE802.3 Protocol.....	7-4
7.4.8	Address Conversion Requirements for IEEE802.11/11b Protocol .....	7-5
7.5	Communications Type Conversion Processing .....	7-5
7.5.1	Communications Type Conversion Specifications for Power Line Communications Protocol .....	7-5

7.5.2	Communications Type Conversion Specifications for Low-power Wireless Protocol	7-5
7.5.3	Communications Type Conversion Specifications for Extended HBS Protocol	7-6
7.5.4	Communications Type Conversion Specifications for IrDA Control Protocol	7-6
7.5.5	Communications Type Conversion Specifications for LonTalk Protocol	7-6
7.5.6	Communication Type Conversion Requirements for the IP/Bluetooth Protocol	7-6
7.5.7	Communication Type Conversion Requirements for IP/Ethernet/IEEE802.3 Protocol	7-7
7.5.8	Communications Type Conversion Requirements for IEEE802.11/11b Protocol	7-7
7.6	Common Lower-Layer Communications Interface Processing	7-7
7.7	Description of Processing Functions	7-7
Chapter 8	ECHONET Communication Middleware State Transitions	8-1
8.1	Basic Concept	8-1
8.2	State Transitions in ECHONET Communications Processing Block	8-2
Chapter 9	ECHONET Objects: Detailed Specifications	9-1
9.1	Basic Concept	9-1
9.2	ECHONET Properties: Basic Specifications	9-2
9.2.1	ECHONET Property Value Data Types	9-2
9.2.2	ECHONET Property Value Range	9-2
9.2.3	Class-specific Compulsory Properties	9-3
9.2.4	Properties that Must Have a Status Change Announcement Function	9-3
9.2.5	Array	9-4
9.3	Device Object Super Class Specifications	9-6
9.3.1	Overview of Device Object Super Class Specifications	9-6
9.3.2	Operating Status Property	9-9
9.3.3	Installation Location Property	9-9
9.3.4	Specification Version Information	9-11
9.3.5	Fault Status Property	9-11
9.3.6	Error Description Property	9-11
9.3.7	Manufacturer Code Property	9-13
9.3.8	Place-of-Business Code Property	9-13
9.3.9	Product Code Property	9-13
9.3.10	Serial Number Property	9-14
9.3.11	Date-of-Manufacture Property	9-14
9.3.12	Property Map Property	9-14
9.3.13	Node Identification Number Property	9-15
9.3.14	Manufacturer Error Code Property	9-16
9.3.15	Current Limit Setting Property	9-16
9.3.16	Power-saving Operation Setting Property	9-16
9.3.17	Cumulative Operation Hours Property	9-16
9.3.18	Time Setting Property	9-17
9.3.19	Date Setting Property	9-17
9.4	Sensor-related Device Class Group Objects: Detailed Specifications	9-17
9.5	Air Conditioning-related Device Class Group Objects: Detailed Specifications	9-17
9.6	Housing/Equipment-related Device Class Group Objects: Detailed Specifications	9-17
9.7	Cooking/Housework-related Device Class Group Objects: Detailed Specifications	9-17
9.8	Health-related Device Class Group Objects: Detailed Specifications	9-17

---

9.9	Management/Control-related Device Class Group Objects: Detailed Specifications	9-18
9.9.1	Detailed Specifications for Secure Communication Common Key Setup Node Class	9-18
9.10	Profile Object Class Group Specifications	9-18
9.10.1	Overview of Profile Object Super Class Specifications	9-19
9.10.2	Property Map	9-20
9.11	Profile Class Group: Detailed Specifications	9-20
9.11.1	Node Profile Class: Detailed Specifications	9-21
9.11.2	Router Profile Class: Detailed Specifications	9-32
9.11.3	Detailed Requirements for the NetID Server Profile Class	9-36
9.11.4	ECHONET Communications Processing Block Profile Class: Detailed Specifications	9-38
9.11.5	Protocol Difference Absorption Processing Block Profile Class: Detailed Specifications	9-40
9.11.6	Lower-Layer Communications Software Profile Class: Detailed Specifications	9-41
9.12	Requirements for the Communication Definition Class Group	9-44
9.12.1	Overview of Communications Definition Object Super Class Specifications	9-46
9.12.2	Property Map	9-46
9.13	Specifications for Status Notification Method Requirement Communications Definition Class Group	9-46
9.14	Requirements for the Set Control Acceptance Method Specification Communication Definition Class Group	9-49
9.15	Specifications for Linkage (Action) Setting Communications Definition Class Group	9-51
9.16	Specifications for Linkage (Trigger) Setting Communications Definition Class Group	9-56
9.17	Requirements for the Local Alteration Limit Setting Communication Definition Class Group	9-61
9.18	Requirements for the Network Control Limit Status Display Communication Definition Class Group	9-64
9.19	Specifications for Secure Communication Access Property Setup Class Group	9-66
9.20	Requirements for the Property Status Referencing Request Complyability Communication Definition Class Group	9-69
9.21	Requirements for the Property Status Notifiability Communication Definition Class Group	9-71
Chapter 10	ECHONET Security Communication Specification	10-1
10.1	ECHONET Security Problems	10-1
10.2	ECHONET Security Policy	10-1
10.3	Encryption Method for ECHONET Secure Communication	10-1
10.4	Positioning of ECHONET in the Protocol Stack	10-1
10.5	Configuration of Secure Communication Messages in ECHONET	10-2
10.5.1	ECHONET Secure Message Format	10-2
10.5.2	ECHONET Header (EHD)	10-2
10.5.3	ECHONET Byte Counter (EBC)	10-2
10.5.4	ECHONET Secure Header (SHD)	10-2
10.5.5	Certification Signature (MAS)	10-6
10.5.6	Plain Text ECHONET Data Section Byte Counter (PBC)	10-8

---

10.5.7	Plain Text ECHONET Data (PEDATA).....	10-8
10.5.8	Block Check Code (BCC).....	10-8
10.5.9	Padding (PDG).....	10-8
10.6	Encryption.....	10-9
10.6.1	Initial Vector.....	10-9
10.6.2	Common Key Block Encryption.....	10-9
10.7	Certification Sequence.....	10-10
10.7.1	Certification Sequence.....	10-10
10.8	Secure Communication Common Key Management.....	10-14
10.8.1	Detailed Requirements for the Secure Communication Common Key Setting Class .....	10-14
10.8.2	Secure Communication Common Key Setting Method.....	10-15
10.8.3	Secure Communication Common Key (User Key) Setting Sequence.....	10-15
10.8.4	Secure Communication Common Key (Service Provider Key) Setting Sequence .....	10-18
10.8.5	Secure Communication Common Key (Maker Key) Setting.....	10-21
10.8.6	Common Key Delivery Method.....	10-22
10.8.7	Common Key Update Synchronization.....	10-24
10.8.8	Method for Ensuring Updated Common Keys of All Devices Unplugged During a Common Key Update.....	10-25
10.9	Node Profile Property Requirement for ECHONET Secure Communication.....	10-27
10.10	Access Limitation.....	10-27
10.11	Secure Communication Access Property Setting Class Group.....	10-31
Appendix 1	References.....	i
Appendix 2	Property Map Description Format.....	ii
Appendix 3	All Router Data Description Format.....	iv
Appendix 4	Instance List Description Format.....	v
Appendix 5	Class List Description Format.....	vii
Appendix 6	NetID Server Startup Sequence.....	ix
Appendix 7	Processing to Be Performed upon Receipt of a Message Containing an Error .....	xiv

---

## Part III Transmission Media And Lower-Layer Communication Software Specification

Chapter 1	Overview of Specifications for Transmission Media Communication Protocol and Lower-Layer Communication Software.....	1-1
1.1	Relationship Between the ECHONET System and Transmission Media.....	1-1
1.2	Overview of the Lower-Layer Communication Software.....	1-3
1.3	Overview of the Supported New Transmission Media .....	1-6
1.4	Relationship Between the ECHONET Specification and Other Standards .....	1-8
Chapter 2	Power Line Communication Protocol Specifications .....	2-1
2.1	System Overview .....	2-1
2.1.1	Scope of the Standard.....	2-1
2.2	Mechanical/Physical Specifications.....	2-2
2.2.1	Connector shape .....	2-2
2.2.2	Intended power line.....	2-2
2.2.3	Medium specifications .....	2-2
2.2.4	Topology.....	2-3
2.3	Electrical Specifications .....	2-4
2.3.1	System specifications .....	2-4
2.4	Logical Specifications .....	2-10
2.4.1	Layer 1.....	2-10
2.4.2	Layer 2.....	2-12
2.4.3	Layer 3.....	2-23
2.5	Basic Sequence.....	2-27
2.5.1	Basic concept .....	2-27
2.5.2	Stop status .....	2-28
2.5.3	Initialize processing status .....	2-28
2.5.4	Communication stop status .....	2-30
2.5.5	Normal operation status .....	2-30
2.5.6	Error stop status.....	2-31
2.6	P&P Setup of House Code and MAC Address.....	2-33
Chapter 3	Low-Power Radio Communication Protocol Specifications .....	3-1
3.1	System Overview .....	3-1
3.1.1	Communication model .....	3-1
3.1.2	ARIB Standard .....	3-2
3.2	Mechanical/Physical Characteristics.....	3-2
3.3	Electrical Characteristics.....	3-3
3.3.1	Transmission system and transmitting signal.....	3-3
3.3.2	Frequency .....	3-3
3.4	Logical Specifications .....	3-9
3.4.1	Data structure .....	3-10
3.4.2	Layer 1.....	3-11
3.4.3	Layer 2.....	3-18
3.4.4	Layer 3.....	3-39
3.5	Basic Sequence.....	3-46
3.5.1	Basic concept .....	3-46
3.5.2	Stop status .....	3-47

---

3.5.3	Initialize processing status .....	3-47
3.5.4	Initialization completion stop status.....	3-48
3.5.5	Normal operation status .....	3-49
3.5.6	Error stop status.....	3-50
3.5.7	Suspension status .....	3-50
Chapter 4	Extended HBS Communication Protocol Specifications .....	4-1
4.1	System Overview .....	4-1
4.2	Mechanical and Physical Characteristics .....	4-2
4.2.1	Transmission media and number of transmission pairs .....	4-3
4.2.2	Cable length.....	4-3
4.2.3	Topology.....	4-3
4.2.4	Number of terminals to be connected .....	4-3
4.2.5	Information socket shape (including compatibility with signals) .....	4-3
4.2.6	Compatibility between information sockets and signals.....	4-3
4.3	Electrical Characteristics.....	4-4
4.3.1	Characteristic impedance of cable.....	4-4
4.3.2	Load resistance of control channel cable .....	4-4
4.3.3	Transmission rate of control signal .....	4-4
4.3.4	Transmission system and transmission waveform of control signal.....	4-5
4.3.5	Transmitting/receiving level of control signal .....	4-5
4.3.6	Impedance and power feed voltage of terminals to be connected.....	4-6
4.3.7	Power feed voltage of control channel.....	4-6
4.4	Logical Layers (Layer 1 Specifications) .....	4-7
4.4.1	Control system.....	4-7
4.4.2	Synchronization system .....	4-7
4.4.3	Basic format of control signal .....	4-8
4.4.4	Pause time and pause period .....	4-8
4.4.5	Packet priority .....	4-9
4.4.6	Collision detection procedure.....	4-9
4.4.7	Synchronization recovery procedure.....	4-10
4.4.8	Short-data interruption procedure .....	4-10
4.5	Logical Specifications (Layer 2 Specifications) .....	4-11
4.5.1	Address.....	4-11
4.5.2	Broadcast, simultaneous broadcast, and group broadcast .....	4-12
4.5.3	Control code .....	4-12
4.5.4	Data length code.....	4-13
4.5.5	Data area.....	4-13
4.5.6	Check code .....	4-14
4.5.7	Dummy code .....	4-14
4.5.8	Error detection and error control (ACK/NAK response).....	4-14
4.6	Logical Specifications (Layer 7 Specifications) .....	4-16
4.6.1	Header code (HD) .....	4-16
4.6.2	System common commands.....	4-16
4.6.3	Communication sequence .....	4-17
4.7	Basic Sequence (Software Internal State Transition Specifications) .....	4-21
4.7.1	Basic concept .....	4-21
4.7.2	Stop status .....	4-22
4.7.3	Initialize processing status .....	4-22

---

4.7.4	Normal operation status .....	4-23
4.7.5	Error stop status.....	4-25
4.7.6	Suspension status .....	4-26
Appendix 4.1	Documents Cited .....	4-27
Appendix 4.2	Details of Command Specifications .....	4-28
Chapter 5	IrDA Control Communication Protocol Specifications .....	5-1
5.1	System Overview .....	5-1
5.1.1	Overview .....	5-1
5.1.2	Scope of the specifications.....	5-2
5.2	Mechanical/Physical Specifications .....	5-3
5.2.1	Characteristics .....	5-3
5.2.2	Topology.....	5-3
5.3	Electrical Specifications.....	5-4
5.3.1	Coding system.....	5-4
5.4	Logical Specifications .....	5-6
5.4.1	Overall data structure image .....	5-6
5.4.2	Layer 1 (PHY layer).....	5-7
5.4.3	Layer 2 (MAC layer).....	5-8
5.4.4	Layer 2 (LLC layer) .....	5-9
5.4.5	Packet accommodation.....	5-11
5.5	Basic Sequence.....	5-12
5.5.1	Basic concept .....	5-12
5.5.2	Stop status .....	5-13
5.5.3	Cold start .....	5-14
5.5.4	Warm start .....	5-17
5.5.5	Communication stop status .....	5-18
5.5.6	Operation status.....	5-20
5.5.7	Error stop status.....	5-22
5.5.8	Suspension status .....	5-22
5.6	Accommodation Specifications.....	5-24
5.6.1	Relationship between host and peripherals .....	5-24
5.6.2	Handling of individually specified messages within a subnet .....	5-24
5.6.3	Recommended conditions for host and peripherals .....	5-24
5.6.4	Mandatory conditions for host and peripherals.....	5-24
Chapter 6	<b>LonTalk Communication Protocol Specification.....</b>	<b>6-1</b>
6.1	System Overview .....	6-1
6.1.1	Organization of Chapter 6.....	6-2
6.2	Mechanical/Physical Specifications.....	6-3
6.3	Electrical Characteristics.....	6-3
6.4	Logical Specifications .....	6-3
6.4.1	Layer 1.....	6-4
6.4.2	Layer 3.....	6-5
6.5	Basic Sequence.....	6-7
6.5.1	Basic concept .....	6-7
6.5.2	Stop status .....	6-8
6.5.3	Initialize processing status .....	6-8
6.5.4	“Communication Stop” status .....	6-9
6.5.5	“Normal Operation” status.....	6-10

---

6.5.6	“Error Stop” status .....	6-11
6.5.7	“Suspension” status .....	6-12
6.5.8	<b>(Neuron Chip) Node ID setting sequence .....</b>	<b>6-13</b>
6.6	RCR STD-16 Transceiver Specifications.....	6-15
6.6.1	System overview .....	6-15
6.6.2	Mechanical/physical specifications.....	6-16
6.6.3	Electrical characteristics.....	6-16
6.6.4	Logical specifications (Layer 1).....	6-17
6.6.5	Transceiver operation sequence .....	6-19
6.6.6	Automatic channel switching system.....	6-19
6.6.7	Group ID registration .....	6-20
6.6.8	<b>(Neuron Chip) Node ID setting .....</b>	<b>6-21</b>
6.6.9	Transmission system .....	6-21

Appendix 7.1 .....	Bluetooth Utility Layer
.....	7-i
Chapter 8 IP/Ethernet/IEEE802.3 Communication Protocol Specifications.....	8-1
8.1 System Overview .....	8-1
8.1.1 Communication model .....	8-2
8.1.2 Applicable standards .....	8-3
8.1.3 Coverage of the ECHONET Specification.....	8-3
8.2 Mechanical and Physical Specifications .....	8-4
8.3 Electrical Specifications.....	8-4
8.4 Overview of the Logical Specifications .....	8-4
8.5 Logical Specifications (Ethernet/IEEE802.3 Network Layer).....	8-8
8.6 Logical Specifications (UDP/IP Layer) .....	8-9
8.7 Logical Specifications (ECHONET/IP Layer).....	8-10
8.7.1 Time requirements.....	8-10
8.8 Basic Sequences .....	8-11
8.8.1 “Stop” status .....	8-12
8.8.2 “Initialization Processing in Progress” status.....	8-12
8.8.3 “Communication Stop” status .....	8-13
8.8.4 “Normal Operation” status .....	8-14
8.8.5 “Error Stop” status .....	8-15
8.8.6 “Suspension” status .....	8-16
8.9 Accommodation Requirements .....	8-17
Chapter 9 IEEE802.11/11b Communication Protocol Specifications .....	9-1
9.1 System Overview .....	9-1
9.1.1 Definitions of Terms.....	9-2
9.1.2 Communication model .....	9-2
9.1.3 Applicable standards .....	9-7
9.1.4 Scope of this chapter .....	9-8
9.2 Mechanical and Physical Requirements.....	9-8
9.3 Electrical Requirements .....	9-8
9.3.1 Transmission method and transmission signals .....	9-8
9.3.2 Frequency.....	9-9
9.4 Overview of the Logical Specifications .....	9-10
9.5 Logical Specifications (IEEE802.11/11b network layer).....	9-11
9.6 Logical Specifications (UDP/IP Layer) .....	9-12
9.7 Logical Specifications (ECHONET/IP Layer).....	9-12
9.7.1 Time requirements.....	9-12
9.8 Basic Sequences .....	9-12
9.8.1 “Stop” status .....	9-14
9.8.2 Initialization Processing in Progress” status .....	9-14
9.8.3 “Communication Stop” status .....	9-15
9.8.4 “Normal Operation” status .....	9-16
9.8.5 “Error Stop” status .....	9-17
9.8.6 “Suspension” status .....	9-18
9.9 Accommodation Requirements .....	9-19
9.9.1 ECHONET MAC address servers.....	9-19
9.9.2 Layer management function accommodation requirements .....	9-19
9.9.3 Initialization parameters .....	9-20

---

9.9.4	Lower-layer communication software initialization data notification requirements	9-21
Supplement 9.1	Scenarios for Starting up ECHONET Nodes Equipped with IEEE802.11/11b Media	9-33
Supplement 9.2	Basic Philosophy for the Use of IEEE802.11/11b Transmission Media Standard-compliant Devices	9-55
Chapter 10	Specifications for the Power Line Communication Protocol C System	10-1
10.1	Physical Layer Specifications	10-1
10.2	Logical Specifications	10-1
10.2.1	Layer 2 packet format	10-1
10.2.2	Layer 2 packet delivery services	10-3
10.2.3	Acknowledgement response packets	10-4
10.3	Layer 2 - 3 Interface Command Set	10-5
10.3.1	Address management and protocol version	10-6
10.3.2	Command and response formats	10-7
10.3.3	Command set	10-8
10.3.4	Packet reception	10-15
10.4	P&P (Plug and Play) Protocol	10-17
10.4.1	Elements for achieving the P&P protocol	10-17
10.4.2	P&P Function Message	10-18
10.4.3	P&P sequence	10-20
10.4.4	Preconditions for performing P&P	10-21
Appendix 10.1	Specifications for Processing at the Protocol Difference Absorption Processing Section	10-22
Chapter 11	Specifications for the Power Line Communication Protocol D System	11-1
11.1	System Overview	11-1
11.1.1	Scope of this chapter	11-1
11.2	Mechanical and Physical Specifications	11-2
11.2.1	Connector shape	11-2
11.2.2	Power lines to use	11-2
11.2.3	Medium specifications	11-2
11.2.4	Topology	11-3
11.3	Electrical Specifications	11-3
11.3.1	System specifications	11-3
11.4	Logical Specifications	11-8
11.4.1	Layer 1	11-8
11.4.2	Layer 2	11-16
11.4.3	Layer 3	11-23
11.5	Basic Sequences	11-23
11.5.1	Basic concept	11-23
11.5.2	“Stop” status	11-24
11.5.3	“Initialization Processing in Progress” status	11-25
11.5.4	“Communication Stop” status	11-26
11.5.5	“Normal Operation” status	11-27
11.5.6	“Error Stop” status	11-28
11.6	P&P Setup of House Code and MAC Address	11-29

## Part IV ECHONET Basic API Specification

Chapter 1	Overview .....	1-1
1.1	Basic Concept.....	1-1
1.2	Positioning on Communication Layers .....	1-2
Chapter 2	ECHONET Basic API Function Specifications .....	2-1
2.1	List of ECHONET Basic API Functions.....	2-1
2.2	ECHONET Basic API Function Specifications .....	2-4
Chapter 3	Level 1 ECHONET Basic API Specifications .....	3-1
3.1	List of Level 1 ECHONET Basic APIs.....	3-1
3.2	Level 1 ECHONET Basic API Detailed Specifications.....	3-4
Chapter 4	Level 2 ECHONET Basic API Specifications (For C Language).....	4-1
4.1	Constant Specifications .....	4-2
4.2	List of Low-level Basic API Functions .....	4-7
4.3	Low-Level Basic API Function Detailed Specifications.....	4-10
4.3.1	MidOpenSession .....	4-11
4.3.2	MidCloseSession.....	4-12
4.3.3	MidSetEA.....	4-13
4.3.4	MidGetEA .....	4-14
4.3.5	MidGetNodeID .....	4-15
4.3.6	MidSetControlVal .....	4-16
4.3.7	MidGetControlVal.....	4-17
4.3.8	MidSetSendEpc, MidExtSetSendEpc .....	4-18
4.3.9	MidSetEpc, MidExtSetEpc .....	4-21
4.3.10	MidGetReceiveEpc, MidExtGetReceiveEpc .....	4-24
4.3.11	MidGetEpc .....	4-27
4.3.12	MidSetSendCheckEpc, MidExtSetSendCheckEpc.....	4-28
4.3.13	MidSetSendEpcM, MidExtSetSendEpcM .....	4-31
4.3.14	MidSetEpcM, MidExtSetEpcM .....	4-35
4.3.15	MidGetReceiveEpcM.....	4-38
4.3.16	MidGetFpcM.....	4-40
4.3.17	MidSetSendCheckEpcM, MidExtSetSendCheckEpcM.....	4-41
4.3.18	MidGetReceiveCheckEpc, MidExtGetReceiveCheckEpc.....	4-44
4.3.19	MidGetEpcSize .....	4-47
4.3.20	MidGetEpcAttrib.....	4-48
4.3.21	MidGetEpcMember.....	4-50
4.3.22	MidCreateNode .....	4-51
4.3.23	MidCreateObj.....	4-52
4.3.24	MidCreateEpc, MidCreateExtEpc.....	4-53
4.3.25	MidCreateEpcM, MidCreateExtEpcM .....	4-56
4.3.26	MidAddEpcMember .....	4-59
4.3.27	MidAddEpcMemberS .....	4-60
4.3.28	MidDeleteNode .....	4-61
4.3.29	MidDeleteObj.....	4-62
4.3.30	MidDeleteEpc .....	4-63
4.3.31	MidDeleteEpcM.....	4-64
4.3.32	MidGetState .....	4-65

---

4.3.33	MidSetRecvTargetList .....	4-66
4.3.34	MidAddRecvTargetList.....	4-67
4.3.35	MidDeleteRecvTargetList .....	4-68
4.3.36	MidGetRecvTargetList.....	4-69
4.3.37	MidStart.....	4-70
4.3.38	MidReset .....	4-71
4.3.39	MidInit.....	4-72
4.3.40	MidInitAll.....	4-73
4.3.41	MidRequestRun.....	4-74
4.3.42	MidSuspend.....	4-75
4.3.43	MidWakeUp .....	4-76
4.3.44	MidSetSendMulti, MidExtSetSendMulti .....	4-77
4.3.45	MidGetReceiveEpcMulti .....	4-80
4.3.46	MidSetSecureContVal .....	4-82
4.3.47	MidStop.....	4-83
4.3.48	MidHalt .....	4-84
4.3.50	MidGetAddressTableData.....	4-87
4.3.55	MidGetLastSendError .....	4-96
Chapter 5	Level 2 ECHONET Basic API Specifications (For Java™ Language) .....	5-1
5.1	Basic Concept.....	5-1
5.2	API Configuration .....	5-3
5.2.1	API classes .....	5-3
5.2.2	Relationship between classes .....	5-3
5.2.3	EN_Object class .....	5-4
5.2.4	EN_Node class .....	5-6
5.2.5	EN_Property class .....	5-6
5.2.6	EN_Packet class .....	5-7
5.2.7	EN_Exception exception class .....	5-7
5.2.8	EN_EventListener interface .....	5-7
5.2.9	EN_Const interface .....	5-7
5.2.10	EN_SecureOpt class .....	5-7
5.2.11	EN_CpException exception class .....	5-7
5.3	Detailed API Specifications .....	5-8
5.3.1	EN_Object class .....	5-9
5.3.2	EN_Node class .....	5-64
5.3.3	EN_Property class .....	5-78
5.3.4	EN_Packet class .....	5-83
5.3.5	EN_Exception exception class .....	5-84
5.3.6	EN_EventListener interface .....	5-85
5.3.7	EN_Const interface .....	5-87
5.3.8	EN_SecureOpt class .....	5-92
5.3.9	EN_CpException exception class .....	5-93

---

## Part V ECHONET Common Lower-layer Communication Interface Specification

Chapter 1	Overview .....	1-1
1.1	Basic Concept.....	1-1
1.2	Positioning on Communication Layers .....	1-2
Chapter 2	ECHONET Common Lower-Layer Communication Interface Function Specifications .....	2-1
2.1	List of ECHONET Common Lower-Layer Communication Interface Functions ....	2-1
2.2	ECHONET Common Lower-Layer Communication Interface Function Detailed Specifications .....	2-2
Chapter 3	Level 1 ECHONET Common Lower-Layer Communication Interface Specifications .....	3-1
3.1	List of Level 1 ECHONET Common Lower-Layer Communication Interface Services .....	3-1
3.2	Level 1 ECHONET Common Lower-Layer Communication Interface Detailed Specifications .....	3-3
Chapter 4	Level 2 ECHONET Common Lower-Layer Communication Interface Specifications .....	4-1
4.1	List of Level 2 ECHONET Common Lower-Layer Communication Interface Functions for C Language .....	4-2
4.2	C Language-oriented Level 2 ECHONET Common Lower-Layer Communication Interface Detailed Specifications .....	4-4
4.2.1	ClcGetDevID.....	4-5
4.2.2	ClcInit.....	4-7
4.2.3	ClcRequestRun.....	4-8
4.2.4	ClcSetTrouble.....	4-9
4.2.5	ClcStart.....	4-10
4.2.6	ClcSuspend.....	4-11
4.2.7	ClcWakeUp .....	4-12
4.2.8	ClcGetProData .....	4-13
4.2.9	ClcGetStatus.....	4-14
4.2.10	ClcInitAll.....	4-15
4.2.11	ClcStop.....	4-16
4.2.12	ClcHalt .....	4-17
4.2.13	ClcLowInit .....	4-18
4.2.14	ClcLowRequestRun .....	4-20
4.2.15	ClcLowStart .....	4-21
4.2.16	ClcLowSuspend .....	4-23
4.2.17	ClcLowWakeUp .....	4-25
4.2.18	ClcGetLowProData .....	4-26
4.2.19	ClcGetLowStatus .....	4-29
4.2.20	ClcSendData.....	4-31
4.2.21	ClcGetSendResult .....	4-33
4.2.22	ClcSendCancel .....	4-35
4.2.23	ClcReceiveData.....	4-37
4.2.24	ClcGetNodeID.....	4-39

4.2.25	ClcSetNodeID .....	4-40
4.2.26	ClcLowInitAll .....	4-42
4.2.27	ClcLowStop.....	4-44
4.2.28	ClcLowHalt .....	4-46
4.2.29	ClcLowGetAddressTableDataSize.....	4-48
4.2.30	ClcLowGetAddressTableData.....	4-50
4.2.31	ClcLowSetMasterRouterFlag.....	4-52
4.2.32	ClcLowGetHardwareAddress .....	4-54
4.3.33	ClcGetNodeIDList .....	4-56
4.2.34	ClcGetMasterRouterInfo.....	4-59
4.2.35	ClcLowReqToHardwareAddress .....	4-61

## Part VI ECHONET Individual Lower-layer Communication Interface Specification

Chapter 1	Overview .....	1-1
1.1	Basic Concept.....	1-1
1.2	Positioning on Communication Layers .....	1-2
Chapter 2	ECHONET Individual Lower-Layer Communication Interface Function Specifications .....	2-1
2.1	List of ECHONET Individual Lower-Layer Communication Interface Functions ..	2-1
2.2	ECHONET Individual Lower-Layer Communication Interface Detailed Specifications .....	2-3
Chapter 3	Level 1 ECHONET Individual Lower-Layer Communication Interface Specifications .....	3-1
3.1	List of Level 1 ECHONET Individual Lower-Layer Communication Interface Services .....	3-1
3.2	Detailed Specifications for Level 1 ECHONET Individual Lower-Layer Communication Interface Services .....	3-3
Chapter 4	Level 2 ECHONET Individual Lower-Layer Communication Interface Specifications .....	4-1
4.1	List of Level 2 ECHONET Individual Lower-Layer Communication Interfaces.....	4-2
4.2	Level 2 ECHONET Individual Lower-Layer Communication Interface Detail Specifications .....	4-4
4.2.1	LowGetDevID .....	4-5
4.2.2	LowInit .....	4-6
4.2.3	LowRequestRun .....	4-8
4.2.4	LowSetTrouble .....	4-9
4.2.5	LowStart .....	4-10
4.2.6	LowSuspend .....	4-11
4.2.7	LowWakeup .....	4-13
4.2.8	LowGetProData.....	4-14
4.2.9	LowGetStatus .....	4-17
4.2.10	LowSendData .....	4-19
4.2.11	LowGetSendResult.....	4-22
4.2.12	LowSendCancel .....	4-23
4.2.13	LowReceiveData .....	4-24
4.2.14	LowGetAddress.....	4-25
4.2.15	LowSetAddress .....	4-26
4.2.16	LowReqToMac.....	4-27
4.2.17	LowReqToID.....	4-28
4.2.18	LowReqBcastID .....	4-29
4.2.19	LowInitAll.....	4-31
4.2.20	LowStop .....	4-33
4.2.21	LowHalt.....	4-35
4.2.22	LowReceiveStop .....	4-37
4.2.23	LowGetAddressTableDataSize .....	4-38
4.2.24	LowGetAddressTableData .....	4-39
4.2.25	LowSetMasterRouterFlag .....	4-41

---

4.2.26	LowGetHardwareAddress .....	4-43
4.2.27	LowGetEchonetMACList .....	4-45
4.2.28	LowGetMasterRouterInfo .....	4-47
4.2.29	LowReqToHardwareAddress .....	4-49
4.3	Initial Setting Information Specifications .....	4-51
4.3.1	Initialization parameter specifications for lower-layer communication software for the Power Line Communication Protocol A, C and D Systems.....	4-52
4.3.2	Initialization parameter specifications for specific low-power RF lower-layer communication software .....	4-52
4.3.3	Initialization parameter specifications for extended HBS lower-layer communication software .....	4-52
4.3.4	Initialization parameter specifications for IrDA-dependent lower-layer communication software .....	4-52
4.3.5	Initialization parameter specifications for LonTalk -dependent lower-layer communication software .....	4-53
4.3.6	Initialization parameter specifications for Bluetooth™ lower-layer communication software .....	4-53
4.3.7	Initialization parameter specifications for Ethernet lower-layer communication software .....	4-53
4.3.8	Initialization parameter specifications for IEEE802.11/11b lower-layer communication software .....	4-53

## Part VII ECHONET Communications Equipment Specification

Chapter 1	Overview of ECHONET Communications Equipment Specifications.....	1-1
1.1	Basic Concept.....	1-1
1.2	Overview of Communications Equipment Specifications for ECHONET Nodes....	1-1
1.3	Overview of Communications Equipment Specifications for ECHONET Device Adapters .....	1-1
1.4	Overview of Communications Equipment Specifications for ECHONET Gateways .....	1-2
1.5	Overview of Communications Equipment Specifications for ECHONET Routers .	1-2
1.6	Overview of Communications Equipment Specifications for ECHONET MAC Address Servers.....	1-2
1.7	Overview of Communications Equipment Specifications for NetID Servers.....	1-3
1.8	Overview of Communications Equipment Specifications for ECHONET Middleware Adapters .....	1-3
Chapter 2	ECHONET Nodes .....	2-1
2.1	Basic Concept.....	2-1
2.2	Function Definition .....	2-1
2.3	Mechanical and Physical Characteristics .....	2-2
2.3.1	Shape .....	2-2
2.3.2	Display block.....	2-3
2.4	NetID Server Function .....	2-3
2.5	ECHONET Nodes and Subnets.....	2-3
2.6	ECHONET Nodes and Domains.....	2-4
2.7	Limitation on Number of Connections.....	2-4
Chapter 3	ECHONET Device Adapters.....	3-1
3.1	Basic Concept.....	3-1
3.2	Function Definition .....	3-4
3.3	Mechanical and Physical Characteristics .....	3-6
3.3.1	Shape .....	3-6
3.3.2	Display block.....	3-6
3.4	Electrical Characteristics.....	3-7
3.5	Logical Conditions .....	3-7
3.6	Adapter Communication Software.....	3-7
3.6.1	Overview of adapter communication software .....	3-7
3.6.2	Adapter communication interface .....	3-9
3.6.3	Mechanical and physical characteristics of adapter communication interface .....	3-9
3.6.4	Electrical characteristics of adapter communication interface.....	3-13
3.6.5	Logical conditions for adapter communication interfaces .....	3-17
3.6.6	Adapter communication interface circuit (reference circuit) .....	3-26
3.6.7	Adapter communication software protocol.....	3-29
3.6.8	Adapter communication interface services .....	3-34
3.6.9	Protocol translation processing .....	3-64
3.6.10	Handling of optional services.....	3-67
3.6.11	Handling of optional data.....	3-67
3.6.12	Inhibition of simultaneous service issuance.....	3-68
3.6.13	Service start/end conditions .....	3-69

---

3.6.14	Timeout .....	3-70
Chapter 4	ECHONET Gateway .....	4-1
4.1	Basic Concept.....	4-1
Chapter 5	ECHONET Router .....	5-1
5.1	Basic Concept.....	5-1
5.2	Function Definition .....	5-1
5.3	Mechanical and physical characteristics .....	5-1
5.3.1	Display block.....	5-2
5.4	Electrical characteristics.....	5-2
5.5	Logical specifications.....	5-2
Chapter 6	IrDA Control Routers .....	6-1
6.1	Basic Concept.....	6-1
6.2	Communication Between Peripherals .....	6-2
6.3	Rules of Broadcast-specified Data Communication .....	6-4
6.3.1	Overview .....	6-4
6.3.2	When receiving broadcast-specified data from outside IrDA subnet.....	6-4
6.3.3	When receiving broadcast-specified data from inside IrDA subnet.....	6-6
6.4	Communication to a Peripheral in the Unbind Status .....	6-8
6.4.1	Basic concept .....	6-8
6.4.2	Sequence.....	6-8
Chapter 7	ECHONET MAC Address Servers .....	7-1
7.1	Basic Concept.....	7-1
7.2	Definitions of the Basic Functions .....	7-1
7.3	ECHONET MAC Address Servers for IP/Bluetooth or IP/Ethernet/802.3 .....	7-2
7.3.1	Mechanical and physical characteristics .....	7-2
7.3.2	Electrical characteristics.....	7-3
7.3.3	Logical specifications.....	7-3
Chapter 8	ECHONET Middleware Adapters.....	8-1
8.1	Basic Concept.....	8-1
8.1.1	Anticipated configurations for ECHONET middleware adapters (commentary)....	8-4
8.2	Definitions of Functions .....	8-8
8.3	Mechanical and Physical Characteristics .....	8-10
8.3.1	Shape .....	8-10
8.3.2	Display section .....	8-10
8.4	Electrical Characteristics.....	8-11
8.5	Logical Requirements .....	8-11
8.6	ECHONET Middleware Adapter Communication Software Specifications .....	8-11
8.6.1	ECHONET middleware adapter communication interfaces – overview .....	8-11
8.6.2	Mechanical and physical characteristics of ECHONET middleware adapter communication interfaces .....	8-13
8.6.3	Electrical characteristics.....	8-22
8.6.4	Logical requirements.....	8-24
8.6.5	ECHONET middleware adapter communication software protocols .....	8-28
8.7	Equipment Interface Data Recognition Service .....	8-29
8.7.1	Frame composition for the equipment interface data recognition service .....	8-29
8.7.2	Commands for the equipment interface data recognition service .....	8-31
8.7.3	Equipment interface data recognition service sequence .....	8-35
8.7.4	Status change diagram for all types.....	8-37

---

8.7.5	Error processing .....	8-40
8.8	Object Generation Type.....	8-42
8.8.1	Frame composition for object generation type interfaces .....	8-43
8.8.2	Internal services of adapters .....	8-46
8.8.3	ECHONET middleware adapter status changes for object generation type interfaces .....	8-51
8.8.4	Commands for object generation type interfaces.....	8-54
8.8.5	Communication sequences (Object generation type).....	8-89
8.8.6	Mechanical and physical characteristics – Object generation method.....	8-101
8.9	Communication Protocols for the “Peer-to-Peer Type” .....	8-102
8.9.1	Program Selection Method.....	8-102
8.9.2	Program Download Method .....	8-103
8.9.3	Protocols to download the program from ECHONET-ready equipment .....	8-104
8.10	(Recommended) Specifications for Interpreter Method-based Program Execution Environments for the “Program Download Method” for the “Peer-to-Peer Type”.....	8-112
8.10.1	Scope of the Recommended Specifications .....	8-112
8.10.2	Overview of Interpreter Method-based program execution environments .....	8-113
8.10.3	Program format specifications .....	8-121
8.10.4	Specifications for the language of the download program.....	8-123
8.10.5	Interpreter Basic API specifications .....	8-125
8.10.6	Interpreter ECHONET API specifications .....	8-135
8.10.7	Program compression and uncompression specifications.....	8-154
Chapter 9	NetID Servers.....	9-1
9.1	Basic Concept.....	9-1
9.2	Definition of Functions .....	9-1
9.3	Mechanical and physical characteristics .....	9-1
9.3.1	Display section .....	9-2
9.4	Electrical characteristics.....	9-2
9.5	Logical specifications.....	9-2
Appendix 1	Reference Document.....	ii
Appendix 2	Example Interpreter Method Programs .....	iii

---

## Part VIII ECHONET Service Middleware Specification

Chapter 1	Overview .....	1-1
1.1	Basic Concept.....	1-1
1.2	Positioning on Communication Layers .....	1-2
1.3	ECHONET Service Middleware and Service Object Defining Method.....	1-3
1.4	Service API.....	1-4
Chapter 2	Service Object Super Class .....	2-1
2.1	Overview of Service Object Super Class Requirements.....	2-1
2.2	Operation Status Property .....	2-4
2.3	Installation Location Property .....	2-4
2.4	Information on the Specification Version.....	2-6
2.5	Node Identification Number.....	2-6
2.6	“Presence/Absence of Fault” Property .....	2-6
2.7	“Description of Fault” Property .....	2-7
2.8	Manufacturer Code Property .....	2-7
2.9	Factory Code Property .....	2-7
2.10	Product Code Property .....	2-7
2.11	Production Number Property .....	2-8
2.12	Date of Manufacture Property.....	2-8
2.13	Property Map Property .....	2-8
Chapter 3	Address Resolution Service Middleware .....	3-1
3.1	Functions of the Address Resolution Service Middleware .....	3-1
3.2	Address Resolution Database.....	3-2
3.2.1	Management ID.....	3-2
3.2.2	Identification information .....	3-2
3.2.3	Identification information type.....	3-3
3.2.4	Presence information.....	3-3
3.2.5	NetID.....	3-3
3.2.6	NodeID.....	3-3
3.2.7	Class designation code .....	3-3
3.2.8	Instance designation code.....	3-3
3.2.9	Installation location .....	3-4
3.2.10	Presence confirmation interval.....	3-4
3.2.11	Presence confirmation interval type.....	3-4
3.2.12	Timeout period .....	3-4
3.2.13	Number of retransmissions .....	3-4
3.2.14	Nickname .....	3-5
3.3	Address Resolution Service Class.....	3-6
3.3.1	Operation status.....	3-6
3.3.2	Address data .....	3-6
3.4	Service Boot Process.....	3-7
3.4.1	Boot by cold start .....	3-7
3.4.2	Boot by warm start .....	3-7
3.5	Processing During Normal Operation.....	3-9
3.5.1	Processing to register a function implemented on the other end of communication upon request .....	3-9

---

3.5.2	Processing to automatically register a function implemented on the other end of communication .....	3-11
3.5.3	Processing to register a function implemented on the other end of communication based on data held by the lower-layer communication software .....	3-11
3.5.4	Processing to confirm the presence of a function implemented on the other end of communication .....	3-12
3.5.5	Processing to use the address resolution DB.....	3-13
3.5.6	Processing to manage other node objects.....	3-13
3.5.7	Control ID-based object processing .....	3-14
3.5.8	Processing to manage timeouts .....	3-15
3.6	Capability Requirements .....	3-15
3.7	Address Resolution Service Interface .....	3-16
3.7.1	Services to start up and stop the address resolution service middleware.....	3-16
3.7.2	Services to register functions implemented on the other end of communication ...	3-17
3.7.3	Confirmation of the presence of a function implemented on the other end of communication .....	3-20
3.7.4	Services to use the address resolution DB .....	3-20
3.7.5	Home node object management services .....	3-23
3.7.6	Non-home node object management services .....	3-36
Chapter 4	File Transfer Service Middleware .....	4-1
4.1	Functions of the File Transfer Service Middleware .....	4-1
4.2	File Reception Service Class.....	4-2
4.2.1	Operation status.....	4-3
4.2.2	Object data for PUSH-type reception.....	4-3
4.2.3	Data split data.....	4-4
4.3	File Transmission Service Class.....	4-5
4.3.1	Operation status.....	4-6
4.3.2	Object data for PULL-type transmission .....	4-7
4.3.3	Transmission and reception setting .....	4-8
4.3.4	Transmission status .....	4-9
4.3.5	File provider data .....	4-9
4.3.6	Transmission file data .....	4-10
4.3.7	Data to be transmitted .....	4-12
4.4	File Transfer Sequences .....	4-13
4.4.1	Equipment startup sequence.....	4-13
4.4.2	PUSH-type file transfer sequence .....	4-16
4.4.3	PULL-type file transfer sequence .....	4-24
4.5	File Transfer Service Middleware Requirements.....	4-32
4.6	File Transfer Service Interface .....	4-32
4.6.1	Services relating to PUSH-type file transmission (transmitting node) .....	4-32
4.6.2	Services relating to PUSH-type file reception (receiving node).....	4-34
4.6.3	Services relating to PULL-type file transmission (transmitting node) .....	4-36
4.6.4	Services relating to PULL-type file reception (receiving node) .....	4-37
Chapter 5	Link Setting Service Middleware.....	5-1
5.1	Functions of the Link Setting Service Middleware.....	5-1
5.2	Action Link Setting Service Class .....	5-1
5.2.1	Action conditions .....	5-2
5.2.2	Action message enable/disable flag .....	5-4

---

5.2.3	Action message makeup information.....	5-4
5.3	Trigger Link Setting Service Class .....	5-10
5.3.1	Trigger processing information .....	5-10
5.3.2	Trigger message enable/disable flag .....	5-12
5.3.3	Trigger message makeup information.....	5-13
5.4	Linked Startup Service Middleware Requirements .....	5-17
5.5	Link Setting Service Interface.....	5-17
5.5.1	Trigger link service .....	5-17
Chapter 6	Group Broadcast Number Management Service Middleware .....	6-1
6.1	Functions of the Group Broadcast Number Management Service Middleware .....	6-1
6.2	Group Broadcast Number Management Service Class .....	6-2
6.2.1	Operation status.....	6-2
6.2.2	Information on the group broadcast numbers that have been set.....	6-2
6.3	Compulsory Requirements.....	6-4
6.4	Group Broadcast Number Management Service Interface .....	6-4
6.4.1	Group broadcast number management service .....	6-4
Chapter 7	EMS Service Middleware for Housing (Suggested Practical Applications).....	7-1
7.1	System Model.....	7-1
7.2	Housing-Dedicated EMS Functions.....	7-3
7.2.1	Housing-dedicated feedback-type peak-cut EMS .....	7-3
7.2.2	Housing-dedicated feed forward type peak-cut EMS .....	7-5
7.2.3	Housing-Dedicated hybrid-type peak-cut EMS .....	7-7
7.3	Housing-Dedicated EMS Service Middleware Functions .....	7-9
7.3.1	Basic concept .....	7-9
7.3.2	Detailed functions of housing-dedicated EMS service middleware .....	7-10
7.4	Housing-Dedicated EMS Service Object.....	7-11
7.4.1	Basic concept .....	7-11
7.4.2	Detailed definitions of housing-dedicated EMS service classes.....	7-11
7.5	Housing-Dedicated EMS Service API .....	7-12
7.5.1	Basic concept .....	7-12
7.5.2	List of function items .....	7-12
Chapter 8	Small Building/Store-Dedicated EMS Service Middleware (Sample Proposal) .....	8-1
8.1	System Model.....	8-1
8.2	Small Building/Store-Dedicated EMS Functions .....	8-2
8.3	Small Building/Store-Dedicated EMS Service Object.....	8-4
8.3.1	Small building/store-dedicated EMS service class .....	8-4
8.3.2	Details of small building/store-dedicated service classes .....	8-5
8.4	Sequence.....	8-9
8.5	EMS Service API for Stores and Small Buildings .....	8-10
8.5.1	Basic concept .....	8-10
8.5.2	List of function items .....	8-10

---

## Part IX ECHONET Gateway Specifications

1.1	Basic Concept.....	1-1
1.2	Concept of ECHONET Connections with External Systems.....	1-1
1.3	ECHONET Gateway Types.....	1-1
1.4	ECHONET Gateways Covered.....	1-2
Chapter 1	Overview .....	1-1
1.1	Basic Concept.....	1-1
1.1.1	Background of the development .....	1-1
1.1.2	Purpose of the Specifications for ECHONET-UPnP Gateways.....	1-1
1.2	Relationship between the ECHONET DCP/ECHONET-UPnP Gateway Software and Other Communication Layers .....	1-1
1.3	System Structure and the Relationship between the ECHONET-UPnP Gateway and Other System Components.....	1-2
1.3.1	Design principles.....	1-2
1.3.2	System structure .....	1-2
1.4	Subject Matters and Scope of the Specifications for ECHONET-UPnP Gateways..	1-4
1.4.1	Subject Matters of the Specifications for ECHONET-UPnP Gateways .....	1-4
1.4.2	Scope of the Specifications for ECHONET-UPnP Gateways.....	1-5
Chapter 2	Definitions of Terms.....	2-1
Chapter 3	UPnP Device-based Method .....	3-1
3.1	Basic Concept.....	3-1
3.2	Classification of ECHONET Properties.....	3-2
3.2.1	ECHONET property type-based classification .....	3-3
3.2.2	Data type-based classification.....	3-7
3.3	Naming Rules.....	3-10
3.3.1	Naming rules necessary for XML Device Descriptions.....	3-10
3.3.2	Naming rules based on ECHONET property type-based classification.....	3-11
3.3.3	Definition of the dataType based on data type-based classification .....	3-12
3.3.4	Argument naming rules.....	3-12
3.4	Summary of the relationships between property types, data types, objects, Action prefixes and dataTypes .....	3-13
Chapter 4	Processing for ECHONET-UPnP Gateways for the UPnP Device-based Method ...	4-1
4.1	Plug and Play Processing .....	4-1
4.1.2	Plug and play processing to be performed when an ECHONET device connects to a network.....	4-3
4.2	Control of ECHONET Devices from UPnP Control Points.....	4-4
4.2.1	Control of ECHONET devices.....	4-4
4.2.2	Referencing the statuses of ECHONET devices .....	4-5
4.3	Notifying the statuses of ECHONET devices to UPnP control points.....	4-8
Chapter 5	Device Template.....	5-1
5.1.1	Device Type.....	5-1
5.1.2	Device requirements.....	5-1
5.2	XML Device Descriptions.....	5-2
5.3	Example XML Device Description (Air Conditioner).....	5-3
Chapter 6	Service Template .....	6-1
6.1	Definition of Service Model.....	6-1

---

6.1.1	Service Type .....	6-1
6.1.2	Service Type requirements .....	6-1
6.1.3	Action .....	6-2
6.2	XML Service Descriptions .....	6-4
6.3	Example XML Service Description (Air Conditioner) .....	6-6
Chapter 7	ECHONET Object-based Method.....	7-1
7.1	Basic Concept.....	7-1
Chapter 8	Processing for ECHONET-UPnP Gateways for the ECHONET Object-based Method .....	8-1
8.1	Plug and Play Processing .....	8-1
8.1.1	Processing to be performed when an ECHONET-UPnP gateway connects to a network.....	8-1
8.1.2	Processing to be performed when a UPnP device connects to a network.....	8-2
8.2	Control of UPnP Devices from ECHONET Objects.....	8-3
8.2.1	Control of UPnP Devices .....	8-3
8.2.2	Referencing the statuses of UPnP devices .....	8-4

---

## Part X Echonet System Design Guidelines

Chapter 1	Overview .....	1-1
1.1	Basic Concept.....	1-1
Chapter 2	Network Configuration .....	2-1
2.1	Network Configuration Requirements .....	2-1
Chapter 3	Distributed Management System .....	3-1
3.1	Overview .....	3-1
3.2	Design Guidelines .....	3-2
3.3	System Design.....	3-3
3.3.1	System Architecture .....	3-3
3.3.2	System Situation-based Design.....	3-4
3.4	Approach to System Entry, Quittance, Registration, and Deletion.....	3-6
3.5	Methods of Confirming ECHONET Node Existence .....	3-7
3.6	System Configuration Data .....	3-8
3.7	System Startup.....	3-9
3.7.1	Definition of System Startup Situation .....	3-9
3.7.2	System Startup Processing .....	3-9
3.7.3	ECHONET Instance Management .....	3-10
3.8	Normal System Operation.....	3-12
3.8.1	Definition of Normal System Operation Situation.....	3-12
3.8.2	Processing During Normal System Operation .....	3-12
3.9	System Errors .....	3-13
3.9.1	Definition of System Error Situation .....	3-13
3.9.2	System Error Processing .....	3-13
3.10	System Maintenance .....	3-14
3.10.1	Definition of System Maintenance Situation .....	3-14
3.10.2	System Maintenance Processing .....	3-14
3.11	Traffic Specifications .....	3-15
3.12	Requirements for Setting Links Using a Communication Definition Object .....	3-15
Chapter 4	Guidelines on Selecting Appropriate Property Values .....	4-1
Chapter 5	ECHONET Secure Communication Requirements .....	5-1
5.1	Adding a New Piece of Equipment to the ECHONET Network .....	5-1
5.2	Types of “Common Keys for Secure Communication” and Their Uses.....	5-1
5.3	Setting a User Secure Key Using a Serial Key .....	5-1
5.4	Sequence for Setting a User Secure Key.....	5-2
5.5	Completion of Setting a User Secure Key .....	5-3

---

## Appendix Detailed Requirements for ECHONET Device Objects

Chapter 1	Detailed Requirements for Device Objects.....	1-1
1.1	Sensor-related Device Class Group.....	1-4
1.1.1	Requirements for gas leak sensor class.....	1-6
1.1.2	Requirements for crime prevention sensor class.....	1-8
1.1.3	Requirements for emergency button class.....	1-10
1.1.4	Requirements for first-aid sensor class.....	1-11
1.1.5	Requirements for earthquake sensor class.....	1-13
1.1.6	Requirements for electric leak sensor class.....	1-15
1.1.7	Requirements for human detection sensor class.....	1-17
1.1.8	Requirements for visitor sensor class.....	1-18
1.1.9	Requirements for call sensor class.....	1-20
1.1.10	Requirements for condensation sensor class.....	1-21
1.1.11	Requirements for air pollution sensor class.....	1-22
1.1.12	Requirements for oxygen sensor class.....	1-23
1.1.13	Requirements for illuminance sensor class.....	1-24
1.1.14	Requirements for sound sensor class.....	1-25
1.1.15	Requirements for mailing sensor class.....	1-27
1.1.16	Requirements for weight sensor class.....	1-28
1.1.17	Requirements for temperature sensor class.....	1-29
1.1.18	Requirements for humidity sensor class.....	1-30
1.1.19	Requirements for rain sensor class.....	1-31
1.1.20	Requirements for water level sensor class.....	1-32
1.1.21	Requirements for bath water level sensor class.....	1-34
1.1.22	Requirements for bath heating status sensor class.....	1-35
1.1.23	Requirements for water leak sensor class.....	1-36
1.1.24	Requirements for water overflow sensor class.....	1-37
1.1.25	Requirements for fire sensor class.....	1-38
1.1.26	Requirements for cigarette smoke sensor class.....	1-40
1.1.27	Requirements for CO2 sensor class.....	1-41
1.1.28	Requirements for gas sensor class.....	1-42
1.1.29	Requirements for VOC sensor class.....	1-44
1.1.30	Requirements for differential pressure sensor class.....	1-46
1.1.31	Requirements for air speed sensor class.....	1-47
1.1.32	Requirements for odor sensor class.....	1-48
1.1.33	Requirements for flame sensor class.....	1-49
1.1.34	Requirements for electric energy sensor class.....	1-50
1.1.35	Requirements for current value sensor class.....	1-52
1.1.36	Requirements for water flow rate sensor class.....	1-53
1.1.37	Requirements for micromotion sensor class.....	1-54
1.1.38	Requirements for passage sensor class.....	1-56
1.1.39	Requirements for bed presence sensor class.....	1-58
1.1.40	Requirements for open/close sensor class.....	1-59
1.1.41	Requirements for activity amount sensor class.....	1-61

---

1.1.42	Requirements for human body location sensor .....	1-63
1.1.43	Requirements for snow sensor class.....	1-65
1.2	Air Conditioner-related Device Class Group .....	1-67
1.2.1	Requirements for home air conditioner class.....	1-69
1.2.2	Requirements for air conditioner ventilation fan class.....	1-94
1.2.3	Requirements for air cleaner class .....	1-96
1.2.4	Requirements for humidifier class .....	1-98
1.2.5	Requirements for electric heater class.....	1-101
1.2.6	Requirements for Fan heater class .....	1-105
1.2.7	Requirements for package-type commercial air conditioner (indoor unit) class ..	1-109
1.2.8	Requirements for package-type commercial air conditioner (outdoor unit) class	1-128
1.3	Housing/Facilities-related Device Class Group .....	1-134
1.3.1	Requirements for electrically operated shade class.....	1-136
1.3.2	Requirements for the electric shutter class.....	1-138
1.3.3	Requirements for electric storm window class .....	1-141
1.3.4	Requirements for sprinkler (for garden) class.....	1-144
1.3.5	Requirements for off peak electric water heater class.....	1-146
1.3.6	Requirement for the electric toilet seat (warm-water washing toilet seat, heating toilet seat, etc.) class.....	1-151
1.3.7	Requirement for the electric lock class .....	1-155
1.3.8	Requirements for instantaneous water heater class.....	1-157
1.3.9	Requirements for bathroom heater and dryer class.....	1-165
1.3.10	Requirements for household solar power generation class .....	1-175
1.3.11	Requirement for cold or hot water heat source equipment class.....	1-177
1.3.12	Requirement for floor heater class .....	1-183
1.3.13	Requirements for watt-hour meter class.....	1-189
1.3.14	Requirements for gas meter class.....	1-192
1.3.15	Requirements for LP gas meter class .....	1-194
1.3.16	Requirements for general lighting class .....	1-200
1.3.17	Requirements for buzzer class.....	1-201
1.4	Cooking/Household-related Device Class Group .....	1-202
1.4.1	Requirements for electric hot water pot (electric thermos).....	1-204
1.4.2	Requirements for refrigerator class .....	1-206
1.4.3	Requirements for combination microwave oven (electronic oven) class .....	1-219
1.4.4	Requirements for cooking heater class.....	1-235
1.4.5	Requirements for rice cooker class .....	1-241
1.4.6	Requirements for washing machine class .....	1-244
1.4.7	Requirements for washer and dryer class.....	1-247
1.5	Health-related Device Class Group.....	1-280
1.5.1	Requirements for weighing machine class.....	1-281
1.6	Management/Operation-related Device Class Group .....	1-282
1.7	Audiovisual-related Device Class Group.....	1-283
1.7.1	Requirements for weighing machine class.....	1-284
1.7.2	Requirements for television class.....	1-290

---

## Appendix 2 .... Detailed Requirements for the ECHONET Device Control Protocol

Chapter 1	Detailed Requirements .....	1-1
1.1	Device Object Super Class .....	1-2
1.2	Sensor-related Device Class Group .....	1-7
1.2.1	Requirements for gas leak sensor class .....	1-7
1.2.2	Requirements for crime prevention sensor class .....	1-8
1.2.3	Requirements for emergency button class .....	1-9
1.2.4	Requirements for first-aid sensor class .....	1-10
1.2.5	Requirements for earthquake sensor class .....	1-11
1.2.6	Requirements for electrical leak sensor class .....	1-12
1.2.7	Requirements for human body detection sensor class .....	1-13
1.2.8	Requirements for visitor sensor class .....	1-14
1.2.9	Requirements for call sensor class .....	1-15
1.2.10	Requirements for condensation sensor class .....	1-16
1.2.11	Requirements for air pollution sensor class .....	1-17
1.2.12	Requirements for oxygen sensor class .....	1-18
1.2.13	Requirements for illuminance sensor class .....	1-19
1.2.14	Requirements for sound sensor class .....	1-20
1.2.15	Requirements for mailing sensor class .....	1-21
1.2.16	Requirements for weight sensor class .....	1-22
1.2.17	Requirements for temperature sensor class .....	1-23
1.2.18	Requirements for humidity sensor class .....	1-24
1.2.19	Requirements for rain sensor class .....	1-25
1.2.20	Requirements for water level sensor class .....	1-26
1.2.21	Requirements for bathwater level sensor class .....	1-27
1.2.22	Requirements for bath heating completion detection sensor class .....	1-28
1.2.23	Requirements for water leak sensor class .....	1-29
1.2.24	Requirements for water overflow sensor class .....	1-30
1.2.25	Requirements for fire sensor class .....	1-31
1.2.26	Requirements for cigarette smoke sensor class .....	1-32
1.2.27	Requirements for CO2 sensor class .....	1-33
1.2.28	Requirements for gas sensor class .....	1-34
1.2.29	Requirements for VOC sensor class .....	1-35
1.2.30	Requirements for differential pressure sensor class .....	1-36
1.2.31	Requirements for wind speed sensor class .....	1-37
1.2.32	Requirements for odor sensor class .....	1-38
1.2.33	Requirements for flame sensor class .....	1-39
1.2.34	Requirements for electricity sensor class .....	1-40
1.2.35	Requirements for amperage sensor class .....	1-42
1.2.36	Requirements for water flow rate sensor class .....	1-43
1.2.37	Requirements for micromotion sensor class .....	1-44
1.2.38	Requirements for passage sensor class .....	1-45
1.2.39	Requirements for bed presence sensor class .....	1-47
1.2.40	Requirements for open/close sensor class .....	1-48
1.2.41	Requirements for “amount of activity” sensor class .....	1-49

---

1.2.42	Requirements for human body location sensor class .....	1-50
1.2.43	Requirements for snow sensor class.....	1-52
1.3	Air-conditioning-related Device Class Group.....	1-53
1.3.1	Requirements for home air conditioner class.....	1-54
1.3.2	Requirements for air conditioning ventilation fan class.....	1-68
1.3.3	Requirements for air purifier class .....	1-70
1.3.4	Requirements for humidifier class .....	1-71
1.3.5	Requirements for electric heater class.....	1-74
1.3.6	Requirements for fan heater class .....	1-76
1.3.7	Requirements for package-type commercial-use air conditioner (indoor unit) class .....	1-80
1.3.8	Requirements for package-type commercial-use air conditioner (outdoor unit) class .....	1-89
1.4	Housing/Facilities-related Device Class Group.....	1-92
1.4.1	Requirements for electrically operated shade class.....	1-93
1.4.2	Requirements for electrically operated shutter class.....	1-94
1.4.3	Requirements for electrically operated window cover class.....	1-95
1.4.4	Requirements for garden sprinkler class .....	1-96
1.4.5	Requirements for off-peak electricity-based electric water heater class.....	1-98
1.4.6	Requirements for electronic toilet seat (bidet toilet seat, electrically-warmed toilet seat, etc.) class.....	1-102
1.4.7	Requirements for electric lock class.....	1-105
1.4.8	Requirements for instantaneous water heater class.....	1-106
1.4.9	Requirements for bathroom heater and dryer class.....	1-110
1.4.10	Requirements for household solar power generation class .....	1-115
1.4.11	Requirements for cold/hot water heat pump class .....	1-116
1.4.12	Requirements for floor heating class.....	1-120
1.4.13	Requirements for electricity meter class .....	1-124
1.4.14	Requirements for gas meter class.....	1-126
1.4.15	Requirements for LP gas meter class .....	1-127
1.4.16	Requirements for general lighting class .....	1-131
1.4.17	Requirements for buzzer class.....	1-132
1.5	Cooking/Household-related Device Class Group .....	1-133

## Definition of Terms

Note: For terms related to the lower-layer communications protocol, see “Definitions of Terms (Lower-Layer Communication Protocol)”.

### **ECHONET**

ECHONET is an abbreviation for Energy Conservation & Homecare Network. This term also means a network for realizing energy conservation and home health care, as well as an answer to a call or a response, from the word “echo”.

### **ECHONET MAC Address Server**

A device that manages the MAC addresses of all ECHONET nodes in a subnet to avoid an address overlap.

### **ECHONET Address (EA)**

An address permitting unique identification of an ECHONET Node in the domain. This address enables the ECHONET Communication Processing Block and the application software to disregard differences in the Lower-Layer Communication Software. This is a logical address that is defined separately from the MAC address native to Lower-Layer Communication Software; it consists of a Net ID and Node ID.

### **ECHONET Object (EOJ)**

A model of information to be disclosed to the network from information owned by the ECHONET Communication Processing Block, or an access procedure model. The information or control target owned by each device is specified as a property, and the operating method (setting, browsing) for this is specified as a service. ECHONET Object is used when class or instance is not considered. It can be broadly classified into four types of objects: Device Object, Profile Object, Communication Definition Object, and Service Object.

### **ECHONET device**

A home device, home electric product, or building/store device, such as lighting, air conditioning, refrigeration, power equipment, ordinary home appliances, sensors, actuators, etc. An ECHONET Node provided with a communication interface and system compatible function conforming to the ECHONET Specification. An ECHONET node provided with a controller function for the centralized control unit with functions to monitor, control, and operate them or an operating unit (remote control, etc.).

### **ECHONET device adapter**

An adapter used to connect to an ECHONET device not provided with a communication interface for transmission media specified in ECHONET. Interface specifications between a device and an ECHONET device adapter conform to the Adapter Communication Interface Specification.

### **ECHONET Device Adapter**

An adapter used to connect a piece of equipment that has neither a communication interface for the transmission medium specified by the ECHONET Specification nor an ECHONET lower-layer communication software program and protocol difference absorption processing section to the ECHONET. The specifications for the interface for communication between the equipment and ECHONET device adapter shall be as specified in the Adapter Communication Interface Specifications.

### **ECHONET Basic API**

→ Basic API

### **ECHONET Basic Service Middleware**

→ Basic Service Middleware

### **ECHONET Common Lower-Layer Communication Interface**

→ Common Lower-Layer Communication Interface

### **ECHONET gateway**

An ECHONET Node functioning to connect an ECHONET domain and an external system (including other ECHONET domains). Multiple ECHONET gateways may exist in the domain depending on differences in the external system(s) to be connected.

### **ECHONET Individual Lower-Layer Communication Interface**

→ Individual Lower-Layer Communication Interface

### **ECHONET Service (ESV)**

A function of the ECHONET Object. The services for property values are specified. There are three such services: "Request", "Response" (processing response/"process not possible" response), and "Notice".

### **ECHONET Service API**

→ Service API

### **ECHONET Service Object**

→ Service Object

### **ECHONET Service Middleware**

→ Service Middleware

### **ECHONET Communication Processing Block**

One processing block for the ECHONET Communication Middleware. This block performs communication protocol processing to facilitate remote device control/monitoring processing for application software, stores information for the above, and controls various information on the self-device as well as other device status.

### **ECHONET Communication Middleware**

This middleware is arranged at a position between application software and Lower-Layer Communication Software and performs communication processing according to the ECHONET communication protocol. The major features of ECHONET are implemented by ECHONET Communication Middleware.

### **ECHONET domain**

A range on the network within which information transmission is logically guaranteed by ECHONET. Generally, it is thought that property and security control, including homes and stores, use the same range as a domain, but the domain is not limited by any standard.

### **ECHONET Node**

A communication node conforming to the ECHONET specification. In ECHONET, this is an ECHONET communication function to be uniquely identified by an ECHONET Address. There is no distinction between the application functions of nodes. The term node is used to describe the function of one communication terminal on ECHONET.

### **ECHONET Property (EPC)**

An attribute of an ECHONET Object. It defines an attribute such as set value and status as property. For reading or writing, the ECHONET Service is used.

### **ECHONET Middleware Adaptor**

An adapter used to connect a piece of equipment that has neither a communication interface for the transmission medium specified by the ECHONET Specification nor an ECHONET lower-layer communication software program, protocol difference absorption processing section and ECHONET communication processing block to the ECHONET. The specifications for the interface for communication between the equipment and ECHONET device adaptor shall be as specified in the ECHONET Middleware Adaptor Communication Interface Specifications.

### **ECHONET Middleware Adaptor Communication Interface**

The interface for communication between an ECHONET middleware adaptor and a piece of ECHONET-ready equipment.

### **ECHONET Middleware Adaptor Communication Software**

A software program that converts and executes services which are exchanged between the ECHONET communication processing block and ECHONET-ready equipment application software. There are two types of communication, namely the object generation and peer-to-peer types. Switching between the two types is achieved by the equipment interface data recognition service. This software program must be implemented in both the ECHONET middleware adaptor and ECHONET-ready equipment.

### **ECHONET Router**

An ECHONET node that connects an ECHONET subnet with an ECHONET subnet or ECHONET subnets. There are two types of ECHONET routers, namely automatic setting routers and manual setting routers. An ECHONET router connects a subnet with another that uses a different lower-layer communication protocol (i.e. another subnet that uses a different transmission medium or that uses the same transmission medium but with a different protocol) or connects two or more subnets with each other that use the same transmission medium and protocol. The function of an ECHONET router is routing processing that is based on ECHONET addresses. Connection between lower-layer communication protocols achieved by an ECHONET router is seamless on the system level.

### **ECHONET-Ready Equipment (Ready\_Device)**

A piece of equipment that has an application software program which is higher than the ECHONET communication middleware (ECHONET communication processing block). A piece of ECHONET-ready equipment performs communication processing below the ECHONET communication middleware (ECHONET communication processing block). A piece of ECHONET-ready equipment connected to an ECHONET middleware adaptor can connect to the ECHONET network

### **EMS (Energy Management Service/Energy Management System)**

This service, designed to enable the efficient use of energy, efficiently operates and controls devices while maintaining a safe, comfortable living environment. It can also refer to a system using it as an application.

### **ET 2101**

A home networking standard published by the Electronic Industries Association of Japan in September 1988.

### **IrDA Control router**

An ECHONET router that connects a subnet using IrDA Control with an adjacent subnet. For routing processing, requirements for a general ECHONET router and requirements native to IrDA Control must both be satisfied. In other words, ECHONET router functions must be implemented on the IrDA Control host. When it serves as a router, the IrDA host should absorb restrictions on the communication functions of IrDA Control.

### **JEM-1439**

A home networking standard (dealing with equipment systems in particular) published by the Electronic Industries Association of Japan in August 1988.

### **MAC address**

An address to implement layer 2 communication in the transmission medium. In ECHONET, this does not signify an Ethernet MAC address.

### **Net ID**

A subnet identifier. This is also a component of an ECHONET Address.

### **NetID Server**

The functions of assigning NetIDs to the subnets which are included in a domain with an automatic setting router and for which the automatic setting router acts as the master router and of sending router IDs to the automatic setting router, or an ECHONET node with such functions.

### **Node ID**

An identifier used to identify an ECHONET Node uniquely within the subnet. This is a logical address converted from the MAC address native to the Lower-Layer Communication Software. This is also a component of an ECHONET Address.

### **Access rule (AR)**

A group of ECHONET Services executable for ECHONET properties.

### **Adapter Communication Interface**

An interface between an ECHONET device adapter and a device.

### **Adapter Communication Interface protocol (ACIP)**

A protocol between adapter communication interfaces. In the Adapter Communication Software, an Adapter Communication Software protocol is converted into an Adapter Communication Interface protocol or vice versa.

### **Adapter Communication Software**

Software that executes a service to be exchanged through the Common Lower-Layer Communication Interface after converting it into an Adapter Communication Interface protocol. As an intermediate conversion step, it also handles an Adapter Communication Software protocol. This software must be mounted on both device adapter and device.

### **Adapter Communication Software protocol (ACSP)**

A protocol that is positioned in the intermediate step of conversion between a service to be exchanged through the Common Lower-Layer Communication Interface (or service specified by the adapter vendor) and an Adapter Communication Interface protocol. This protocol is handled by the Adapter Communication Software.

### **Application software**

Software that remotely controls devices connected to the system in the controller, or software that implements device functions themselves in individual devices such as air conditioners or refrigerators.

### **Ordinary Node**

An ECHONET node that has neither the ECHONET router functions nor the NetID server functions.

### **Instance**

An entity when ECHONET Objects exist. When multiple objects of the same class exist in a single node, multiple instances should exist. In ECHONET, Instance Codes are used for instance identification.

### **Instance Code**

A code that represents an instance. However, code 0x00 is used to signify a simultaneous broadcast to all instances.

### **Warm start**

A method of starting the ECHONET Node by starting initial setting processing while keeping previous ECHONET Addresses and initial setting information.

### **Lower-Layer Communication Software**

Software to perform communication protocol processing native to each transmission medium. This software mainly performs communication processing equivalent to layer 1 or 2 of the OSI reference model.

In ECHONET, at present, the power line communication protocol for power lines, low-power RF communication protocol for low-power RF, IrDA Control for infrared, extended HBS communication protocol for twisted pair cable, and LonTalk protocol for

low-power RF are defined as Lower-Layer Communication Software.

### **Device adapter**

→ ECHONET Device adapter

### **Device Object**

A logical model of the information held by equipment devices or home electrical appliances such as sensors, air conditioners and refrigerators, or of control items that can be remotely controlled. The interface form for remote control is standardized. The information and control target of each device is specified as property, and the operating method (setting and browsing) is specified as a service.

### **Device Object super class**

A specified property configuration common to all Device Object classes (class group code 0x00 to 0x05).

### **Basic API**

An interface between application software or Service Middleware and the ECHONET Communication Processing Block. It is designed to use the basic functions of ECHONET. Processing requests are mainly made for ECHONET communication operations (start, stop, etc.) and transmitting and receiving functions.

### **Basic Service Middleware**

Service Middleware handling basic functions that can be shared.

### **Common lower-layer Communication Interface**

An interface between the ECHONET Communication Processing Block and the Protocol Difference Absorption Processing Block. Viewed from the ECHONET Communication Middleware, this interface appears to have common specifications regardless of the type of Lower-Layer Communication Software.

### **Class**

A definition of an ECHONET Object. In ECHONET, each class is uniquely identified by a combination of Class Group Code and Class Code.

### **Class Group**

A group of classes. In ECHONET, each group is uniquely identified by a combination of Class Group Code and Class Code.

### **Class Group Code**

A code that represents a Class Group. In ECHONET, each class is uniquely identified by a combination of Class Group Code and Class Code.

### **Class Code**

A code that represents a class. This is specified in units of Class Group. In ECHONET, each class is uniquely identified by a combination of Class Group Code and Class Code.

### **Gateway**

→ ECHONET gateway

### **Gateway Basic Block**

A block to perform processing dependent on the ECHONET domain from the software of the ECHONET gateway Service Middleware.

### **Gateway Individual Block**

A block to perform processing dependent on an external system from the software of ECHONET gateway Service Middleware.

### **Individual identification information**

Unique information for an application to identify each device. The ECHONET Address may be changed by a connecting position to the network, but the individual identification information is never changed.

### **Individual Lower-Layer Communication Interface**

An interface between the Protocol Difference Absorption Processing Block and the Lower-Layer Communication Software.

### **Cold start**

A method for starting the ECHONET node by starting initial setting processing while abandoning previous information related to ECHONET Addresses.

### **Cold start (1)**

An ECHONET node startup method for starting an initial setup process while discarding the house code information, MAC address information, and ECHONET address information that were used for the last startup.

(Versions 2.10 and later)

### **Cold start (2)**

An ECHONET node startup method for starting an initial setup process while retaining the house code information used for the last startup but discarding the previous MAC address information and ECHONET address information. Equivalent to the cold startup method provided by Versions 2.01 and earlier.

(Versions 2.10 and later)

### **Cold start (3)**

An ECHONET node startup method for starting an initial setup process while retaining the previous house code information and MAC address information but discarding the ECHONET address information.

(Versions 2.10 and later)

### **Service API**

An interface designed to access Service Middleware from the application software.

### **Service Object**

A modeled function to be disclosed to the network based on Service Middleware functions. Class specifications such as property are defined as ECHONET Objects.

### **Service Middleware**

Software that mounts the standard and common functions required for implementation of an application. This software is classified into two types: Basic Service Middleware, which handles basic functions that may be shared; and Service Middleware, which is designed for a specific application.

### **Subnet**

A group of nodes using the same Lower-Layer Communication protocol. Each subnet has a Net ID. Different subnets can be connected by an ECHONET router.

### **Participation**

A status in which ECHONET Nodes are connected to the ECHONET, enabling communication. In other words, this status permits access to a Node Profile Object.

### **Self-device**

General term for a group of Self-device Objects.

### **Self-device Object**

An ECHONET Object for disclosing self-node functions to others or receiving control from others.

### **Automatic Setting Router**

An ECHONET router that is capable of obtaining the NetIDs and router IDs of the subnets for which it acts as the master router from the NetID server and of obtaining the NetIDs of the subnets for which it acts as the slave router from other routers in those subnets.

### **Self-node**

Node in which the self is mounted, as viewed from application software and middleware.

### **Manual Setting Router**

An ECHONET router that is not capable of obtaining the NetIDs and router IDs of the subnets for which it acts as the master router from the NetID server. Normally a unique NetID and router ID are given in advance or set by means of DIP switches etc.

### **System**

An application with a specific objective; consists of two or more devices or controllers that are organically operated in a linked form by information exchange.

### **System architecture**

A configuration of various controllers or devices and a structure for function/role sharing between them in a system consisting of multiple devices or controllers.

### **Slave Router**

When two or more ECHONET routers exist in a subnet, the ECHONET routers other than the one located in the path to the NetID server are called the “slave routers” of the subnet. Slave routers are identified by the “master router data” property of the “router profile object.”

### **Other-device**

General term for a group of Other-device Objects.

### **Other-device Object**

An ECHONET Object that controls other node functions or obtains their status.

### **Other-node**

A node other than the Self-node. This node is accessed through the network.

### **Communication Definition Object**

A model of controls and setting items for the communication operations of Device Objects and Profile Objects. This object is specified for each Device Object or Profile Object.

### **Communication conversion device adapter**

A device adapter that permits connecting the Full ECHONET device to the ECHONET system by another different lower-layer communications protocol.

### **Communication Middleware**

→ ECHONET Communication Middleware

### **Default Router**

An ECHONET router to which an ordinary node that is not an ECHONET router and does not have routing data (simplified processing node) requests message routing processing when the node needs to send a message to an ECHONET node located in a subnet other than the one to which the node belongs.

### **Transmission Media**

Physical medium for communication. At present, power lines, low-power RF, infrared, and twisted pair cables are specified as transmission media in ECHONET.

### **Transmission media addition device adapter**

A device adapter that permits connecting to the ECHONET system through the addition of Lower-Layer Communication Software to the Flex ECHONET device.

### **Registration**

Storing and holding of the application information of the corresponding ECHONET Node in the system, together with an ECHONET Address. The information is generated as linkage information or as an instance list in any ECHONET Node. It has no relation to the physical status of participation or non-participation.

### **Topology**

A physical multi-point network configuration. Connection of different transmission media is included.

### **Domain**

→ ECHONET domain

## **Node**

→ ECHONET Node

## **Full ECHONET device (Full\_Device)**

A device that has a communications interface standardized by ECHONET and can be connected to the ECHONET system by itself.

## **Flex ECHONET device (Flex\_Device)**

A device having ECHONET Communication Middleware (ECHONET Communication Processing Block) and application software higher than the Common Lower-Layer Communication Interface. When the Flex ECHONET device is connected to an ECHONET device adapter (transmission media addition device adapter) for communication processing lower than the Common Lower-Layer Communication Interface, it can be connected to the ECHONET system.

## **Protocol Difference Absorption Processing Block**

One processing block of the ECHONET Communication Middleware. This block is intended to absorb differences of multiple protocols, including power lines and low-power RF, to configure a single network. The block performs address translation, communication type conversion, data division, and data assembly.

## **Property**

→ ECHONET Property

## **Property map**

Contents of property support for each instance. This is intended to identify mounted functions.

## **Profile Object**

A model of profile information and controls and setting items as an ECHONET Node, such as ECHONET Node operation status, manufacturer information, and Device Object list.

## **Deletion**

Deletion of corresponding ECHONET Node information and ECHONET Address from the system. The information is deleted from the linkage information of all ECHONET Nodes and instance lists. This has no relation to participation or non-participation.

## **Master Router**

When two or more ECHONET routers exist in a subnet, one of the ECHONET routers

must be located in the path to the NetID server (the first router in the subnet that was given the router data by the NetID server). This ECHONET router is called the “master router” of the subnet and treated differently from the other ECHONET routers in the subnet. Master routers are identified by the “master router data” property of the “router profile object.”

### **Secession**

Status in which an ECHONET Node secedes from the ECHONET network (including Power Off), disabling communications. In other words, the Node Profile Object cannot be accessed.

### **Router**

→ ECHONET router

### **Linkage**

An operation status change of the other ECHONET device as the operation status or measured value of one of the ECHONET device changes. In other words, the property value of the other specific instance changes with the property value of one specific instance.

## Abbreviations

Note: For abbreviations related to the lower-layer communications protocol, see “Definitions of Abbreviations (Lower-Layer Communication Protocol)”.

**ACIP**

Adapter Communication Interface Protocol

**ACSP**

Adapter Communication Software Protocol

**API**

Application Programming Interface

**AR**

Access Rule

**DEA**

Destination ECHONET Address

**DEOJ**

Destination ECHONET Object

**EA**

ECHONET Address

**EBC**

ECHONET Byte Counter

**EDATA**

ECHONET Data

**EDC**

ECHONET Data Counter

**EDT**

ECHONET Property Value Data

**EHD**

ECHONET Header

**EOJ**

ECHONET Object

**EPC**

ECHONET Property

**ESV**

ECHONET Service

**Flex\_Device**

Flex ECHONET Device

**Full\_Device**

Full ECHONET Device

**HBS**

Home Bus System

**OHD**

Object Data Header

**SEA**

Source ECHONET Address

**SEOJ**

Source ECHONET Object

## Definition of Terms (Lower-Layer Communication Protocol)

Note: For terms other than those regarding lower-layer communications protocol, see “Definition of Terms”.

### [Definitions of Power Line Protocol A System Terms]

#### **Primary modulation**

Modulation performed before execution of a spectrum spread for an information signal.

#### **ARQ**

Automatic Repeat Request.

When information with an error detection code is transmitted, the receiver makes a request to resend if an error is detected.

#### **BER**

Bit Error Rate.

#### **CSMA**

Carrier Sense Multiple Access.

Implementation of multi-access by carrier signal detection.

#### **DS-SS system**

Direct Sequence Spread Spectrum.

A system for transmitting a signal by multiplying an information signal by a spread signal for a wider spectrum.

#### **FEC**

Forward Error Correction.

Signal is transmitted together with an error correction code included in the information, and receiving side performs self-correction.

#### **SUBBAND delay detection system**

A system in which the DS-SS signal is divided into bands on the receiver side, and a delay is detected for each band and then integrated.

**Blocking filter**

A filter that blocks the leakage of a high-frequency signal from one high-frequency device to another.

**[Definitions of Power Line Communication Protocol B System Terms]**

**Primary modulation**

Modulation to be performed for a transmit signal in the multi-carrier system.

**AMP**

Amplifier.

**BER**

Bit Error Rate.

**CSMA**

Carrier Sense Multiple Access.

**DBPSK**

Differential Binary Phase Shift Keying.

**DQPSK**

Differential Quadrature Phase Shift Keying.

**D8PSK**

Differential 8 Phase Shift Keying.

**HPF**

High-Pass Filter.

**LPF**

Low-Pass Filter.

**Coupling system**

A coupling system between an output from the modem or a signal on the power line, and the power line when said signal is input to the modem.

**Carrier sense**

Monitors transmit signals of other terminals at transmission.

**tone**

A single modulation signal to be arranged at a spacing of 4.3125 kHz for a multi-carrier transmit signal.

**House code**

A code to be attached to the special carrier system digital transmitter to avoid radio interference with another special carrier type digital transmitter.

**House code information**

Information about the power line or LonTalk® house code or the information about the specific low-power RF system identification code.

**Multi-carrier**

A signal system that performs communication by putting a modulation signal on multiple tones spread at equal frequency spacing.

**Modem**

Modulator and demodulator unit using the modulation/demodulation system specified in the Power Line Communication System in Part 3.

**[Low-power RF Protocol]**

**31-bit M series code**

One of the pseudo-random codes.

**ARIB Standard**

The Standard of Association of Radio Industries and Businesses that includes the contents of laws, ministerial ordinances, and MITI notifications.

**BCH code**

Bose-Chaudhuri-Hocquenghem code. One of the error detection/correction codes.

**CSMA**

Carrier Sense Multiple Access.

## **F1D**

A symbol to indicate radio type

F: Frequency modulation

1: No use of sub-carrier wave for modulation

D: Data transmission, tele-metering, or remote command transmission information.

## **FSK**

Frequency Shift Keying.

A modulation system for changing carrier frequency based on transmission data.

## **NRZ code**

Non return-to-zero code

## **RCR STD-16,30**

Standards No.16 and 30 of the Research & Development Center for Radio Systems, the precursor to the Association of Radio Industries & Businesses.

## **Device identification code**

A unique identification code (MAC address) for each device comprising a radio system.

At low-power RF, this code is used for transmitter identification or receiver identification.

## **One-way system**

A communication system designed to perform transmission only to a single destination.

## **Simplex system**

A communication system that transmits in opposite directions between two communicating parties.

## **Broadcast communication system**

A communication system designed only to simultaneously transmit the same contents to two or more specific destinations.

## **Radio system identification code**

A unique identification code for each radio system. With low-power RF, communication is disabled between systems having different system identification codes.

### **Link connection, establishment, and disconnection**

To perform data communications continuously and more than once, a link is established between the calling office and the called office to increase communication efficiency. Link connection fixes the destination and shortens the reception wait cycle prior to data communication. Link disconnection clears the fixed status of the destination and returns the reception wait cycle to the original status after completion of data communication.

## **[Definitions of IrDA Control Terms]**

### **AGC (Automatic Gain Control)**

An infrared receiver sensitivity adjustment signal.

### **CRC (Cyclic Redundancy Check)**

An error detection signal.

### **HADD (Host Address)**

MAC (physical) address of the host (8 bits).

### **LLC layer (Logical Link Control layer)**

This layer is provided mainly with functions such as packet loss detection and re-transmission.

### **MAC layer (Media Access Control layer)**

This layer is provided with functions such as property information exchange between host and peripherals, connection, scheduling for 1:N communication, destination device identification, and error detection.

### **PADD (Peripheral Address)**

A temporary MAC address (4 bits) to be given to a peripheral at bind execution.

### **PHY (Physical Layer)**

A physical layer. This layer consists of AGC, PRE, STA, MAC frame, CRC, and STO.

### **PRE (IrDA Control Preamble Field)**

A signal to be used for clock synchronization.

**STA (IrDA Control Start Flag)**

Start flag. This is synchronized with the symbol.

**STO (IrDA Control Start Flag)**

Stop flag. This indicates the end of packet.

**Address control table**

A table to control PADD, peripheral ID, virtual MAC address, etc.

**Intensity**

Power for unit solid angle. (mw/steradian)

**Enumeration**

A procedure for exchanging information between the host and peripherals.

**Virtual MAC address**

The logical MAC address of a uniquely defined peripheral.

**Sub-carrier**

IR pulse group whose modulation is used as a signal for data transmission.

**Sub-carrier duty**

Ratio of continuous IR radiation time in one sub-carrier cycle to the total time of one sub-carrier cycle.

**Packet**

Period from the start of an AGC area to the end of an STO area during IrDA Control transmission.

**Binding**

A procedure used by the host to poll a peripheral.

**Peak wavelength**

Wavelength when optical output intensity is maximized. (### m)

**Peripheral**

A device to be polled by the IrDA Control host, to which IrDA Control is applicable.

**Peripheral ID**

A 32-bit peripheral device ID set at the factory.

**Irradiance**

Power per unit area ( $\mu\text{W}/\text{cm}^2$ )

**Host**

A device that permits polling IrDA Control peripheral groups, and to which IrDA Control is applicable.

**[Definitions of LonTalk Protocol Terms]**

**APP**

APPLICATION

**BUSY signal**

A send disable signal output from the RF microcomputer to the Neuron chip. The collision detection signal is notified to the NET-CPU of the Neuron chip, while the BUSY signal is notified to the APP-CPU of the Neuron chip.

**LON**

Local Operating Network.

A distributed intelligent control network system developed by Echelon Corporation of the U.S.

**MAC**

MEDIA ACCESS CONTROL.

**NET**

NETWORK.

**Neuron chip**

A VLSI device that is the nucleus of the LON. TMPN3150, TMPN3120xx.

**RF**

Radio Frequency. Used to mean radio or radio signal.

### **RF microcomputer**

A control circuit that acts as an intermediary between the Neuron chip and the RF module. This need not be limited to microcomputers.

### **RF module**

A module in which a radio modulator/demodulator circuit, amplifier, PLL circuit, etc. are integrated. Data input/output, PLL data input, or input/output selection are generally used as an external interface. The input/output waveform shaping circuit may exist outside the module. Here, "RF module" is used as a generic term for all of these.

### **RxSW**

A switch for opening/closing transfer of RF demodulation output (receive data) from the RF microcomputer to the Neuron chip.

### **TxSW**

A switch for selecting between data transmission from the Neuron chip and data transmission from the RF microcomputer.

### **Communication port**

A communication port for the network in the Neuron chip.

### **Differential Manchester coding system**

This system supervises state transition at the beginning of each bit period with the object of clock synchronization on the receiver side. This is called clock transition. The data of 0/1 is indicated depending on whether another transition (data transition) exists between the current clock transition and the next clock transition. When such a transition does exist, the data is set to 0. Otherwise it is set to 1.

### **Detection collision signal**

The Neuron chip inputs this signal at Active-Low from communication port CP4. During transmission, if the signal remains low over the system clock period (200 ns at 10 MHz clock), it is notified that "Collision" took place or is taking place. The LON judges "the necessity for message re-transmission". In this status, re-access is attempted.

### **Send enable signal**

A trigger signal that the Neuron chip outputs prior to data transmission. In the single-end mode, this signal is output at Active-Low from communication port CP2.

\* Echelon, LON, LonTalk, Neuron, 3150, and 3120 are registered trademarks of Echelon Corporation of the U.S.

## **【Definitions of IEEE802.11/11b Terms】**

### **ACK (acknowledge)**

A frame that is used to confirm that data has been received correctly.

### **AP (access point)**

A point that is located in a BSS and is used to manage intra-BSS communications and to connect to other networks. Within a BSS, a star-shaped topology is formed around the AP.

### **Authentication**

The authentication process to test the validity of the STA before starting communication. In IEEE802.11, two different authentication methods can be used; the open system authentication method and the shared key authentication method.

### **BSS (basic service set)**

A basic service set is a network that consists of a single IEEE802.11 access point and STA's associated with that access point.

### **BSSID**

A 48-bit-long identifier unique to each BSS.

### **CCK (complementary code keying)**

A spread spectrum system used in IEEE802.11b (5.5Mbps/11Mbps).

### **CTS (clear to send)**

A packet used to prevent the "hidden terminal" problem. RTS-CTS frame exchange is performed before data transmission to prevent the "hidden terminal" problem.

### **DBPSK (differential binary phase shift keying)**

A digital-to-analog signal modulation system. In IEEE802.11, this is used when the data rate is 1Mbps.

### **DS-SS (direct sequence spread spectrum)**

A direct-type spread spectrum system, which is highly resistant to noises.

### **DQPSK (differential quadrature phase shift keying)**

A digital-to-analog signal modulation system, which allows 4-phase (2-bit) values to be transmitted with a single modulation step.

**ESS (extended service set)**

A network that consists of 2 or more BSS's.

**IBSS (independent basic service set)**

A network that consists of STA's only and does not have an AP.

**IEEE802.11**

A high-speed wireless LAN standard developed by the IEEE.

**IEEE802.11b**

An extended IEEE802.11 standard, which mainly covers PHY layers. This standard allows communication speeds of 5.5Mbps and 11Mbps to be achieved with DS-SS in the 2.4GHz band.

**Infrastructure mode**

An IEEE802.11 communication mode, in which each BSS has an AP.

**ISM (Industry Science Medical) band**

A frequency band (2.4GHz band) intended for industrial, scientific and medical equipment. Low-power equipment such as wireless LAN equipment can be freely used in this band without obtaining a license.

**Open system authentication**

An authentication algorithm that does not use an encryption method.

**RTS (request to send)**

A packet used to prevent the "hidden terminal" problem. RTS-CTS frame exchange is performed before data transmission to prevent the "hidden terminal" problem.

**Shared key authentication**

An authentication algorithm that uses an encryption method called WEP. This method requires both parties of communication to have a common encryption key to be authenticated.

**SSID**

An identifier unique to each element of an ESS.

**STA (station)**

A communication station.

**WECA (Wireless Ethernet Compatibility Alliance)**

An industry organization formed with the purpose of ensuring interoperability of IEEE802.11 standards. The name of the organization was changed to Wi-Fi Alliance in October 2002.

**WEP (wired equivalent privacy)**

An encryption method defined in IEEE802.11.

**WEP key**

An encryption key used in the WEP method. In IEEE802.11, two different key lengths are defined; 40-bit and 104-bit.

**WiFi (Wireless Fidelity)**

An authentication standard developed to ensure interoperability of IEEE802.11a/IEEE802.11b standards.

**Handoff**

A function that allows STA's located in the same ESS to move from one BSS to another without an interruption in communication. Handoff is also called roaming.

## Abbreviations (Lower-Layer Communication Protocol)

Note: For abbreviations other than those of the lower-layer communications protocol, see “Definitions of Abbreviations”.

### [Definitions of IrDA Control Abbreviations]

**AGC**

Automatic Gain Control

**BER**

Bit Error Rate or Bit Error Ratio

**BIOS**

Basic Input/Output System

**bps**

Bits per second

**CL**

Critical Latency

**CRC**

Cyclic Redundancy Check

**CRC-16**

16bit CRC based on the polynomial  $x^{16} + x^{15} + x^2 + 1$

**CRC-8**

8 bit CRC based on the polynomial  $x^8 + x^7 + x^2 + 1$

**DBS**

Data Bit Set

**HADD**

Host Address

**IR**

Infrared

**IRB-TM**

Infrared Bus Transceiver Module

**IrDA**

Infrared Data Association

**IRED**

Infrared Emitting Diode

**IrLAP**

Infrared Link Access Protocol

**Kbps**

Kilo bits per second

**LLC**

Logical Link Control

**LSB**

Least Significant Bit

**MAC**

Media Access Control layer

**MSB**

Most Significant Bit

**NCL**

Non-Critical Latency

**NRZ**

Non Return to Zero code

**PADD**

Peripheral Address

**PDA**

Personal Digital Assistant

**PFID**

Peripheral physical Identifier

**PHY**

Physical layer

**Pin-PD**

Pin PhotoDiode

**PRE**

IrDA Control Preamble field

**PSM**

Pulse Sequence Modulation

**SEPC**

Sub-carrier Emission Pulse Chip

**SEPD**

Sub-carrier Emission pulse Duration

**SIR**

IrDA Serial Infrared standard, 115.2kbit/s (1.0)

**STA**

IrDA Control Start flag

**STL**

IrDA Control Start flag ( Long Packet )

**STO**

IrDA Control Stop flag

**STS**

IrDA Control Start flag ( Short Packet )

**USB**

Universal Serial Bus
